Summary of Evaluation Findings for the Testing of Seismic Isolation and Energy Dissipating Devices Highway Innovative Technology Evaluation Center (U.S.), 1999-01-01 Prepared by the Highway Innovative Technology Evaluation Center HITEC a CERF Service Center his report summarizes the results of an evaluation that was designed to test the performance of 11 seismic isolators and dampers The devices were tested for stability response during earthquake simulations and fatigue and weathering effects **Monthly Catalog of United States Government Publications** United States. Superintendent of Documents, 1982 Sustainable Winter Road Operations Xianming Shi, Liping Fu, 2018-03-27 The first and only comprehensive guide to best practices in winter road operations Winter maintenance operations are essential to ensure the safety mobility and productivity of transportation systems especially in cold weather climates and responsible agencies are continually challenged to provide a high level of service in a fiscally and environmentally responsible manner Sustainable Winter Road Operations bridges the knowledge gaps providing the first up to date authoritative single source overview and guide to best practices in winter road operations that considers the triple bottom line of sustainability With contributions from experts in the field from around the world this book takes a holistic approach to the subject The authors address the many negative impacts on regional economies and the environment of poorly planned and inadequate winter road operations and they make a strong case for the myriad benefits of environmentally sustainable concepts and practices Best practice applications of materials processes equipment and associated technologies and how they can improve the effectiveness and efficiency of winter operations optimize materials usage and minimize cost corrosion and environmental

impacts are all covered in depth Provides the first up to date authoritative and comprehensive overview of best practices in sustainable winter road operations currently in use around the world Covers materials processes equipment and associated technologies for sustainable winter road operations Brings together contributions by an international all star team of experts with extensive experience in designing implementing and managing sustainable winter road operations Designed to bring professionals involved in transportation and highway maintenance and control up to speed with current best practice Sustainable Winter Road Operations is essential reading for maintenance professionals dealing with snow and ice control operations on highways motorways and local roads It is a valuable source of information and guidance for decision makers researchers and engineers in transportation engineering involved in transportation and highway maintenance And it is an ideal textbook for advanced level courses in transportation engineering

Performance Measures to Improve Transportation Systems Katherine F. Turnbull, 2005 **Highway Maintenance Concept Vehicle Final Report** Stephen J. Andrle, 2002 This report documents Phase IV of the Highway Maintenance Concept Vehicle HMCV project a pooled fund study sponsored by the Departments of Transportation of Iowa Pennsylvania and Wisconsin This report provides the background including a brief history of the earlier phases of the project a systems overview and descriptions of the research conducted in Phase IV Finally the report provides conclusions and recommendations for future research Background The goal of the Highway Maintenance Concept Vehicle Pooled Fund Study is to provide travelers with the level of service defined by policy during the winter season at the least cost to taxpayers This goal is to be accomplished by using information regarding actual road conditions to facilitate and adjust snow and ice control activities The approach used in this study was to bring technology applications from other industries to the highway maintenance vehicle This approach is evolutionary in that as emerging technologies and applications are found to be acceptable to the pooled fund states and as they appear that to have potential for supporting the study goals they become candidates for our research The objective of Phase IV is to Conduct limited deployment of selected technologies from Phase III by equipping a vehicle with proven advanced technologies and creating a mobile test laboratory for collecting road weather data The research quickly pointed out that investments in winter storm maintenance assets must be based on benefit cost analysis and related to improving level of service For example Iowa has estimated the average cost of fighting a winter storm to be about 60 000 to 70 000 per hour typically The maintenance concept vehicle will have advanced technology equipment capable of applying precisely the correct amount of material accurately tailored to the existing and predicted pavement conditions Hence a state using advanced technology could expect to have a noticeable impact on the average time taken to establish the winter driving service level If the concept vehicle and data produced by the vehicle are used to support decision making leading to reducing material usage and the average time by one hour a reasonable benefit cost will result Data from the friction meter can be used to monitor and adjust snow and ice control activities and inform travelers of pavement surface conditions Therefore

final selection of successfully performing technologies will be based on the foundation statements and criteria developed by the study team
