Military Psychology for Africa Gideon Van Dyk, 2016-03-17 Military Psychology for Africa is the first textbook of its kind from Africa. Selected authors with competent military psychology knowledge, skills, expertise, and experience each contributed a chapter to this unique book. The book empowers academics, students, and military fellows to apply this knowledge at academic institutions and military units during operations and in presenting short courses. The book will also equip soldiers with new knowledge for advancing peace on the continent and abroad.

The Military Balance 2014 The International Institute for Strategic Studies (IISS), 2021-12-24 The Military Balance 2014 contains region by region analysis of the major military and economic developments affecting defence and security policies and the trade in weapons and other military equipment. Detailed entries describe the military capabilities of 171 countries, displaying key equipment inventories and defence economics. Comprehensive tables detail major training activities, UN and non-UN deployments, and international comparisons of defence expenditure and military personnel.

Unconventional Water Resources Manzoor Qadir, Vladimir Smakhtin, Sasha Koo-Oshima, Edeltraud Guenther, 2022-05-26 The world is faced with a growing number of complex and interconnected challenges. Water is among the top 5 global risks in terms of impacts which would be far reaching beyond socio-economic challenges, impacting livelihoods and wellbeing of the people. As freshwater resources and population densities are unevenly distributed across the world, some regions and countries are already water scarce. Water scarcity is expected to intensify in regions like the Middle East and North Africa (MENA) which has 6% of the global population but only 1% of the world's freshwater resources. Climate change adds to this complexity as it is leading to rainfall uncertainty and extended droughts, periods mostly in arid areas. Increasing water scarcity is now recognized as a major cause of conflict, social unrest, and migration, and at the same time, water is increasingly considered as an instrument for international cooperation to achieve sustainable development. Tapping and assessing sustainably every available option in water scarce areas is needed as pressure continues to build on limited water resources. The stark fact is that conventional water provisioning approaches relying on snowfall, rainfall, and river runoff are not enough to meet growing freshwater demand in water scarce areas. Water scarce countries need a radical re-think of water resource planning and management that includes the creative exploitation of a growing set of viable but unconventional water resources for food production, livelihoods, ecosystems, climate change adaptation, and sustainable development. Unconventional water resources are generated as a by-product of specialized processes, need suitable pre-use treatment, require pertinent on-farm management when used for irrigation, or result from a special technology to collect access water.
