DIY Financial Advisor Wesley R. Gray, Jack R. Vogel, David P. Foulke, 2015-08-10 DIY Financial Advisor A Simple Solution to Build and Protect Your Wealth DIY Financial Advisor is a synopsis of our research findings developed while serving as a consultant and

asset manager for family offices By way of background a family office is a company or group of people who manage the wealth a family has gained over generations The term family office has an element of cachet and even mystique because it is usually associated with the mega wealthy However practically speaking virtually any family that manages its investments independent of the size of the investment pool could be considered a family office The difference is mainly semantic DIY Financial Advisor outlines a step by step process through which investors can take control of their hard earned wealth and manage their own family office Our research indicates that what matters in investing are minimizing psychology traps and managing fees and taxes These simple concepts apply to all families not just the ultra wealthy But can or should we be managing our own wealth Our natural inclination is to succumb to the challenge of portfolio management and let an expert deal with the problem For a variety of reasons we discuss in this book we should resist the gut reaction to hire experts We suggest that investors maintain direct control or at least a thorough understanding of how their hard earned wealth is managed Our book is meant to be an educational journey that slowly builds confidence in one's own ability to manage a portfolio We end our book with a potential solution that could be applicable to a wide variety of investors from the ultra high net worth to middle class individuals all of whom are focused on similar goals of preserving and growing their capital over time DIY Financial Advisor is a unique resource This book is the only comprehensive guide to implementing simple quantitative models that can beat the experts And it comes at the perfect time as the investment industry is undergoing a significant shift due in part to the use of automated investment strategies that do not require a financial advisor's involvement DIY Financial Advisor is an essential text that guides you in making your money work for you not for someone else

Value Creation in European Equity Carve-Outs Nikolas

Pojezny,2007-10-24 Over the past two decades equity carve outs ECOs have become an increasingly popular form of corporate restructuring in Europe Individual business segments are separated from the parent conglomerate company and a minority stake is listed on the stock exchange The parent company thus retains economic control over the subsidiary while simultaneously creating more transparency for capital markets restructuring its investment portfolio and creating the option to either reintegrate or completely sell off the subsidiary at a later stage The attractiveness of ECOs as research objects is largely due to their dualistic nature as both means of parent company financing and corporate restructuring While comprehensive academic literature on ECOs already exists studies mainly focus on the US market The objective of the present study is to conduct corresponding analyses using a European sample allowing the examination of both research issues on an intra European level and of the admissibility of analogies between US and European results

Strategic Analysis Of Financial Markets, The (In 2 Volumes) Steven D Moffitt, 2017-03-24 Volume 1 of The Strategic Analysis of Financial Markets Framework is premised on the belief that markets can be understood only by dropping the assumptions of rationality and efficient markets in their extreme forms and showing that markets still have an inherent order and inherent logic But that order results primarily from the predictable irrationality of investors as well as from people's uncoordinated attempts to profit The market patterns that result do not rely on rationality or efficiency A framework is developed for understanding financial markets using a combination of psychology statistics game and gambling analysis market history and the author's experience It expresses analytically how professional investors and traders think about markets as games in which other participants employ inferior partially predictable strategies Those strategies interactions can be toxic and lead to booms bubbles busts and crashes or can be less dramatic leading to various patterns that are mistakenly called market inefficiencies and stylized facts A logical case is constructed starting from two foundations the psychology of human decision making and the Fundamental Laws of Gambling Applying the Fundamental Laws to trading leads to the idea of gambling rationality grationality replacing the efficient market's concept of rationality By classifying things that are likely to have semi predictable price impacts price distorters one can identify explore through data analysis and create winning trading ideas and systems A structured way of doing all this is proposed the six step Strategic Analysis of Market Method Examples are given in this and Volume 2 Volume 2 of The Strategic Analysis of Financial Markets Trading System Analytics continues the development of Volume 1 by introducing tools and techniques for developing trading systems and by illustrating them using real markets The difference between these two Volumes and the rest of the literature is its rigor It describes trading as a form of gambling that when properly executed is quite logical and is well known to professional gamblers and analytical traders But even those elites might be surprised at the extent to which quantitative methods have been justified and applied including a life cycle theory of trading systems Apart from a few sections that develop background material Volume 2 creates from scratch a trading system for Eurodollar futures using principles of the Strategic Analysis of Markets Method SAMM a principled step by step approach to developing profitable trading systems It has an entire Chapter on mechanical methods for testing and improvement of trading systems which transcends the rather unstructured and unsatisfactory backtesting literature It presents a breakout trend following system developed using factor models It also presents a specific pairs trading system and discusses its life cycle from an early highly profitable period to its eventual demise Recent developments in momentum trading and suggestions on improvements are also discussed
