GULTON INDUSTRIES INC ALBUQUERQUE N MEX., 1943 A portable time code generator which approaches laboratory stability in a rugged unit designed for sled borne operation is described In operation the Model CGT 150 timer is mounted on the sled and connected to a block house control unit via hard wire A manual switch on the block house control unit permits the operator to disconnect the sync signals prior to sled pull away to check for drift in the sled borne timer The drift may be monitored on a visual display mounted in the block house control unit which indicates the phase difference in micro seconds between the master and the sled timers This permits a convenient last minute check of the system prior to sled firing As an additional check on the system a pulse by pulse comparison is made between the master and sled timers If the sled borne timer drifts out of sync with the master a red light and buzzer sounds the alarm A voltmeter on the front of the block house control unit monitors the battery voltage supply for the sled borne timer Author A Low-Power Digital Timer with Potentiometer Setting Mechanism Friedrich W. Flad, HARRY DIAMOND LABS ADELPHI MD., 1977 A digital electronic timer is described that uses the position of a potentiometer for time selection Upon activation of a power supply a counter in the timer is preset to the binary equivalent of the potentiometer setting and then proceeds to time out by counting from the preset state to

overflow The counting rate is determined by the frequency of a crystal controlled oscillator During the time interval up to and including the preset cycle the current drain of the circuit is 800 microamp at 5.5 V After completion of the preset operation the current consumption drops to 20 microamp at the reduced voltage of 3.6 V This low operating power makes it possible to use this circuitry in a fuze with a fluidic power supply wherein a charged capacitor could bridge a temporary power loss during projectile flight through apogee Although the system is described with a potentiometer as the input device the electronic part is not so limited This preset scheme can be used whenever the digital output from the counter can be converted into a single valued time varying function commensurate with a constant or quasi constant input quantity which is a function of the desired time delay
