Construction Manager-at-risk Project Delivery for Highway Programs Douglas D. Gransberg, Jennifer Sue Shane, 2010. TRB's National Cooperative Highway Research Program NCHRP Synthesis 402. Construction Manager at Risk Project Delivery for Highway Programs explores current methods in which state departments of transportation and other public engineering agencies are applying construction manager at risk (CMR) project delivery to their construction projects. CMR project delivery is an integrated team approach to the planning, design and construction of a highway project to help control schedule and budget and to help ensure quality for the project owner. The team consists of the owner, the designer who might be an in-house engineer and the at-risk construction manager. The goal of this project delivery method is to engage at-risk construction expertise early in the design process to enhance constructability, manage risk and facilitate concurrent execution of design and construction without the owner relinquishing control over the details of design as it would in a design-build project.

Handbook of Recycled Concrete and Demolition Waste F. Pacheco-Torgal, Yining Ding, 2013-09-30. The civil engineering sector accounts for a significant percentage of global material and energy consumption and is a major contributor of waste material. The ability to recycle and reuse concrete and demolition waste is critical to reducing environmental impacts in meeting national, regional and global environmental targets. Handbook of recycled concrete and demolition waste summarises key recent research in achieving these goals. Part one considers techniques for managing construction and demolition waste including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants and the economics of managing construction and
