

Figure 1.8 Five unifying themes that run throughout the discipline of biology.

MAJOR THEMES IN BIOLOGY				
Evolution	Structure/Function	Information Flow	Energy Transformations	Interconnections within Systems
				
Evolution by natural selection is biology's core unifying theme and can be seen at every level in the hierarchy of life.	The structure of an object, such as a molecule or a body part, provides insight into its function, and vice versa.	Within biological systems, information stored in DNA is transmitted and expressed.	All biological systems depend on obtaining, converting, and releasing energy and matter.	All biological systems, from molecules to ecosystems, depend on interactions between components.
