Both the bodies reach the ground simultaneously. Calculate t and the velocities of A and B on reaching the ground.

Or

- (b) Two smooth spheres 1 and 2 having a mass of 2 kg and 4 kg respectively collide with initial velocities as shown in Fig. 9. If the coefficient of restitution for the spheres is $e = 0.8$, determine the velocities of each sphere after collision.

15. (a) Two blocks A and B are placed on inclined planes as shown in Fig. 10. The block A weighs 1000 N. Determine minimum weight of the block B for maintaining the equilibrium of the system. Assume that the blocks are connected by an inextensible string passing over a frictionless pulley. Coefficient of friction μ_A between the block A and the plane is 0.25. Assume the same value for μ_B .

Materials with Complex Behaviour Lucas F. M. da Silva, Holm Altenbach, 2010-08-17 Common engineering materials reach in many demanding applications such as automotive or aerospace. Their limits and new developments are required to fulfill increasing demands on performance and characteristics. The properties of materials can be increased, for example, by combining different materials to achieve better properties than a single constituent or by shaping the material or constituents in a specific structure. Many of these new materials reveal a much more complex behavior than traditional engineering materials due to their advanced structure or composition. Furthermore, the classical applications of many engineering materials are extended to new ranges of applications and to more demanding environmental conditions such as elevated temperatures. All these tendencies require, in addition to the synthesis of new materials, proper methods for their manufacturing and extensive programs for their characterization. In many fields of application, the development of new methods and processes must be accomplished by accurate and reliable modeling and simulation techniques. Only the interaction between these new developments with regards to manufacturing modeling, characterization, further processing and monitoring of materials will allow to meet all demands and to introduce these developments in safety-relevant applications. The 3rd International Conference on Advanced Computational Engineering and Experimenting ACE X 2009 was held in Rome, Italy, from 22 to 23 June 2009 with a strong focus on the above-mentioned developments.
