

16 Darwin's Theory of Evolution

Evolution

Q: What is natural selection?

18.1 What patterns of biodiversity did Darwin observe around the world?

WHAT I KNOW

Learn's answer: The world is full of about 2.5 million species of plants and animals.

WHAT I LEARNED

Learn's answer: Darwin noticed that different, yet similar, species inhabited separate, but similar, habitats around the globe. Also, different, yet related, species often occupied different habitats within a local area.

18.2 How did other scientists' work help Darwin develop his theory of natural selection?

Learn's answer: Other scientists did research on how organisms behaved in different environments.

Learn's answer: Hutton and Lyell concluded that Earth is extremely old. Lamarck suggested that species are not fixed. Malthus reasoned larger populations would deplete resources.

18.3 What is Darwin's theory of evolution by natural selection?

Learn's answer: Organisms that are best adapted to their environment survive longer and have more offspring.

Learn's answer: Natural selection is the process by which organisms with variations most suited to their local environment survive and have more offspring. Over time, beneficial traits accumulate in a population.

18.4 What are the main lines of scientific evidence that support Darwin's theory of evolution by natural selection?

Learn's answer: Fossils show how organisms have changed over time.

Learn's answer: Biogeography, fossils, homologous structures, vestigial structures, embryological development, the universal genetic code, analogous molecules, and field studies provide evidence of evolution.

trade of communicating hypotheses about the historical path of evolution is a graphical representation called a phylogenetic tree. In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present. To each branch is tied a tag with a name, a binominal symbol that functions as does the name given to an individual human being. On phylogenetic trees the names symbolize species. What exactly do these names signify? What kind of information is communicated when we claim to have knowledge of the following types: *Tetodonius mathewzi* was ancestral to *Pseudotetodonius ambiguus*. The sample of fossils attributed to *Homo habilis* is too variable to contain only one species. Interbreeding populations of savanna baboons all belong to *Papio anubis*. *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap. While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works, there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species. This is because oddly enough evolutionary biologists are quite far from agreement on what a species is, how it attains this status, and what role it plays in evolution over the long term.

College Biology I
 James Hall Zimmerman, Sophie E. Merritt, 1963 *CBSE Class 12th Biology - 10 Most Likely Question Papers with Solutions By Career Point, Kota*
 Career Point Kota, 2020-07-28

The CBSE has made certain changes in the assessment structure from the session 2019-20 onwards. In the new scheme of examination CCE and term system has been replaced with the Internal Assessment. Single Annual Exam by CBSE itself. Single exam conducted by CBSE will carry 80 marks, whereas 20 marks are left to the schools for internal assessment. CBSE has issued detailed guidelines on how the internal marks will be divided among different activities. From 2019 onwards there will be internal choices in board examinations with increased internal options in the question paper. Considering this change now a student has to prepare accordingly for board examinations. The new assessment format brought with it excitement as well as anxiety. And to help them prepare and excel in their CBSE board examination Career Point Kota has developed a series of 10 Most Likely Question Papers with Solutions. The Key Features of Most Likely Question Papers with Solutions Series: New OBJECTIVE TYPE question in each paper. Syllabus of CBSE 2019-20. Based on the latest CBSE Syllabus. Pattern Mind map of each chapter is given to visualize and help acquire a better understanding. Important terms, facts, formulae, and quick revision tips are given. Covers questions asked in previous year board exams. Toppers Answer Sheet as released by CBSE to understand the scoring technique. We hope this book will gratify students' need for the new CBSE pattern board exam and smoothen their path to success. We wish to utilize the opportunity to place on record our special thanks to all the members of the Content Development team for their efforts to create this wonderful book.

The Species Problem David N. Stamos, 2003-03-17 In this provocative work David N Stamos tackles the problem of determining exactly what a biological species is in short whether species are real and the nature of their reality Although many have written on this topic The Species Problem is the only comprehensive single authored book on this central concern of biology Stamos critically considers the evolution of the three major contemporary views of species species nominalism species as classes and species as individuals Finally he develops his own solution to the species problem a solution aimed at providing a universal species concept worthy of the Modern Synthesis This book will be of interest to philosophers of biology and of science in general to historians of biology and to biologists concerned with one of the most significant and practical conceptual issues in their field
