National income accounting is a government bookkeeping system that measures a country's economic activity. It offers insight into how an economy is performing. It measures the health of an economy, projected growth, economic activity, and development during a certain period of time. It helps in assessing the performance of an economy and the flow of money in an economy.

● **Equivalence of the income, output and expenditure approaches to national income accounting, with reference to the circular flow model**

The national income of a country can be measured by three alternative methods: **(i) Product Method (ii) Income Method, and (iii) Expenditure Method**

□ **Product or output method**

In this method, national income is measured as a flow of goods and services. We calculate money value of all **final goods and services** produced during a year by all the productive enterprises in the economy. All the productive enterprises in the economy are classified into three main categories, viz. (i) Primary Sector, (ii) Secondary Sector and (iii) Tertiary Sector.

Final goods here refer to those goods which are directly consumed and not used in further production process. Goods which are further used in production process are called intermediate goods. In the value of final goods, value of intermediate goods is already included therefore we do not count value of intermediate goods in national income otherwise there will be double counting of value of goods.

To avoid the problem of double counting we can use the value-addition method in which not

World Economic Outlook, October 2017 International Monetary Fund. Research Dept.,2017-10-10 The global upswing in economic activity is strengthening Global growth which in 2016 was the weakest since the global financial crisis at 3.2 percent is projected to rise to 3.6 percent in 2017 and to 3.7 percent in 2018 The growth forecasts for both 2017 and 2018 are 0.1 percentage point stronger compared with projections earlier this year Broad based upward revisions in the euro area Japan emerging Asia emerging Europe and Russia where growth outcomes in the first half of 2017 were better than expected more than offset downward revisions for the United States and the United Kingdom But the recovery is not complete while the baseline outlook is strengthening growth remains weak in many countries and inflation is below target in most advanced economies Commodity exporters especially of fuel are particularly hard hit as their adjustment to a sharp step down in foreign earnings continues And while short term risks are broadly balanced medium term risks are still tilted to the downside The welcome cyclical pickup in global activity thus provides an ideal window of opportunity to tackle the key policy challenges namely to boost potential output while ensuring its benefits are broadly shared and to build resilience against downside risks A renewed multilateral effort is also needed to tackle the common challenges of an integrated global economy

Macroeconomics David R. Hakes,N. Gregory Mankiw,1998 **International Macroeconomics in the Wake of the Global Financial Crisis** Laurent Ferrara,Ignacio Hernando,Daniela Marconi,2018-06-13 This book collects selected articles addressing several currently debated issues in the field of international macroeconomics They focus on the role of the central banks in the debate on how to come to terms with the long term decline in productivity growth insufficient aggregate demand high economic uncertainty and growing inequalities following the global financial crisis Central banks are of considerable importance in this debate since understanding the sluggishness of the recovery process as well as its implications for the natural interest rate are key to assessing output gaps and the monetary policy stance The authors argue that a more dynamic domestic and external aggregate demand helps to raise the inflation rate easing the constraint deriving from the zero lower bound and allowing monetary policy to depart from its current ultra accommodative position Beyond macroeconomic factors the book also discusses a supportive financial environment as a precondition for the rebound of global economic activity stressing that understanding capital flows is a prerequisite for economic policy decisions CMA
