Sedimentology of Paralic Reservoirs G.J. Hampson, A.D. Reynolds, B. Kostic, M.R. Wells, 2017-07-20 Paralic reservoirs reflect a range of depositional environments including deltas shoreline shelf systems and estuaries They provide the backbone of production in many mature basins and contribute significantly to global conventional hydrocarbon production However the range of environments together with relative sea level and sediment supply changes result in significant variability in their stratigraphic architecture and sedimentological heterogeneity which translates into complex patterns of reservoir distribution and production that are challenging to predict optimize and manage This volume presents new research and developments in established approaches to the exploration and production of paralic reservoirs The 13 papers in the volume are grouped into three thematic sections which address the sedimentological characterization of paralic
