particle This can be used to model a wide range of situations such as a child on a swing the pendulum of a clock and a chair on a plane roundabout at a fairground In Section 1 we derive the velocity and acceleration of a particle moving in a circle In Section 2 we apply Newton's second law to uniform circular motion i.e. motion in a circle with constant speed In Section 3 this is extended to non uniform circular motion Section 4 starts to look beyond circular motion to the concepts that are needed to analyse more general rotational motion
