The Globalization of American Infrastructure Matthew Heins,2016-01-29 This book gives an account of how the U S freight transportation system has been impacted and globalized since the 1950s by the presence of the shipping container A globally standardized object the container carries cargo moving in international trade and it utilizes and fits within the existing transportation infrastructures of shipping trucking and railroads In this way it binds them together into a nearly seamless worldwide logistics network This process occurs not only in ocean shipping and at ports but also deep within national territories In its dependence on existing infrastructural systems though the network of container movement as it pervades domestic space is shaped by the history and geography of the nation state This global network is not invariably imposed in a top down manner to a large degree it is cobbled together out of national regional and local systems Heins describes this in the American context examining the freight transportation infrastructures of railroads trucking and inland waterways and also the terminals where containers are transferred between train and truck The book provides a detailed historical narrative
