Global Citizenship, Common Wealth and Uncommon Citizenships, 2018-08-16 This set of essays critically analyze global citizenship by bringing together leading ideas about citizenship and the commons in this time that both needs and resists a global perspective on issues and relations Education plays a significant role in how we come to address these issues and this volume will contribute to ensuring that equity global citizenship and the common wealth provide platforms from which we might engage in transformational collective work The authors address the global significance of debates and struggles about belonging and abjection solidarity and rejection identification and othering as well as love and hate Global citizenship as a concept and a practice is now being met with a dangerous call for insularism and a protracted ethno nationalism based on global economic imperialism movements for white supremacy and miscegenation various forms of religious extremism and identity politics but which antithetically also comes from the anti globalization movement focused on building strong sustainable communities We see a taming of citizens that contributes to the taming of what we understand as the public sphere and the commons the places of cultural natural and intellectual resources that are shared and not privately owned The work of global citizenship education is distinguishable from the processes of a deadly globalization or destruction of the world that responds to the interlocking issues that make life on the planet precarious for human and non humans everywhere albeit an unequal precarity This book is an invitation into a conversation that explores and makes visible some of the hidden chasms of oppression and inequity in the world It is meant to provoke both argument and activism as we work to secure common spaces that are broadly life sustaining Contributors are Ali A Abdi Sung Kyung Ahn Chouaib El Bouhali Xochilt Hernandez Carrie Karsgaard Marlene McKay Michael O Sullivan Christina Palech Karen Pashby Karen J Pheasant Neganigwane Thashika Pillay Ashley Rerrie Grace J Rwiza Toni Samek Lynette Shultz Harry Smaller Crain Soudien Derek Tannis and Irene Friesen Wolfstone

Decolonisation in Universities Jonathan Jansen, 2019-08-01 In this collection of case studies and stories from the field South African scholars come together to trade stories on how to decolonise the university Shortly after the giant bronze statue of Cecil John Rhodes came down at the University of Cape Town student protestors called for the decolonisation of universities It was a word hardly heard in South Africa's struggle lexicon and many asked What exactly is decolonisation This edited volume brings together the best minds in curriculum theory to address this important question In the process several critical questions are raised Is decolonisation simply a slogan for addressing other pressing concerns on campuses and in society What is the colonial legacy with respect to curriculum and can it be undone How is the project of curriculum decolonisation similar to or different from the quest for postcolonial knowledge indigenous knowledge or a critical theory of knowledge What does decolonisation mean in a digital age where relationships between knowledge and power are shifting The book combines strong conceptual analyses with novel case studies of attempts to do decolonisation in settings as diverse as South Africa Uganda Tanzania and Mauritius Such a comparative perspective enables reasonable

judgements to be made about the prospects for institutional take up within the curriculum of century old universities

Activating Academia for an Era of Colliding Crises Alison Julia Katherine Green, Adam R. Aron, James Dyke, 2025-10-28 While there has been discussion for decades about the need to rethink the core purpose of academia to enable all to live well on a planet of finite resources humanity's present predicaments point to a paradox at the heart of the academic enterprise Although academic institutions have originated research and innovations that underpin much of what we view as development and progress these same advances are also responsible for the global crises we now face Indeed many voices are now arguing that academia can and must do more to drive the transformative change that is needed if we are to avert the imminent catastrophe that is almost upon us The Alliance for Sustainability leadership in Education EAUC in conjunction with Second Nature and the United Nations Environment's Youth and Education Alliance announced in 2019 that over 7 000 higher and further education institutions across six continents were declaring a climate emergency with a three point plan for action as part of the Race to Zero This enshrined a bolder commitment from academia to play its part in achieving net zero greenhouse gas emissions While there has been success over several decades in fostering Education for Sustainable Development ESD and in embedding sustainability in curricula the efficacy of this has arguably been limited by the disciplinary silos in which academics find themselves Similarly the research and scholarly work that is needed to fully understand planetary limits transcends the traditional silos of academic disciplines This Research Topic then will examine what needs to change to optimise ESD and transdisciplinary approaches to research and teaching It will explore ways in which theories of change can be brought to bear on these issues Our Research Topic also centres on the responsibility acknowledged increasingly by academics for academic institutions and sectors and for academics themselves to do more As trusted educators communicators and policy influencers academia has unique potential and responsibility to guide students and society through this transition to a better future In the case of many academics this means embracing advocacy and activism as their moral responsibility at this point in humanity's history To this end the Research Topic will consider ways in which climate justice principles may be used to explore the responsibilities of academic institutions as one example of an actor with the capacity to influence the drivers of climate breakdown to act In some nations academic institutions have fallen prey to a set

of neoliberal assumptions that have arguably diminished the agency of individual academics. The marketisation of higher education is rife in some nations e.g. UK and US and while some academics have documented rising inequality, a deepening climate and ecological crisis, socio-economic breakdown and the deteriorating psychological and physical well-being these engender, they have so far proven mostly powerless to reorient their fields to confront these challenges at the institutional level. Consequently, they remain unable to pursue an agenda for change that benefits their students and wider society. This Research Topic welcomes research that explores actions available to academics from diverse perspectives, including models of behavioural change. Decades of research have shown that warnings do not work and that evidence-based recommendations do not necessarily translate into policy or institutional change. Academics increasingly refer to a broken science society contract, suggesting that calls to listen to the science and expectations that warnings issued by scientists will be heeded, reflect a depoliticized view of the relationships between science and society. This failure to recognise the intricate ways in which science and policy are connected raises questions about the neutrality of research and the academic enterprise. Our Research Topic invites articles that explore how we might re-make the science society contract. Questions about the independence and interdependence of research and teaching inevitably arise when academic institutions are in receipt of funds from corporations, charities, foundations and individuals. Institutions can be compromised by vested interests, often in the form of corporate interests that can influence research curriculum and staff appointments, and the will of senior management to address this problem is poor. While there are laudable initiatives aimed at resolving intersecting challenges and promoting transdisciplinary approaches in higher education, it is fair to say that increasing numbers of academics globally realise that we are not set up to ready society for an era of colliding environmental and social crises. Many fear that academia is guilty of perpetuating the problems that have created this crisis. And while growing numbers hold this view, few have ready answers as to what more academics and academic institutions can do. In spite of this, some academics have chosen to step outside of their conventional roles, embracing advocacy and activism, either taking individual action outside of their role or seeking to drive change within their institutions. One problem is that action is fragmented, often reliant upon the energies and tenacity of one or more individuals who have sought to re-define their roles to embrace the responsibility they feel to act. The Research Topic will serve to aggregate work on academic activism and to raise awareness of ways in which academics can act. It will also examine the notion that we need to remake the science society contract and will explore what that entails. The Research Topic will explore the interrelations between science and society and highlight the need to examine political dimensions of decision-making and knowledge production. To begin to provide answers to the questions of what it is that academics can do to drive transformational change, this Research Topic brings together voices from diverse disciplines and nations. Their voices have in common one thing: each has reflected on or re-imagined their role and purpose as an academic and each has embraced advocacy or activism. The articles will be organised around three broad themes: i. In what

ways are our academic institutions either failing or succeeding We invite articles that expose the overt and covert influences on academia such as neoliberal structures and fossil fueled research agendas We also invite articles centred on examples of good practice such as initiatives to foster transdisciplinary approaches to research and education ii Trailblazers for transformative change We invite case studies and critiques from the front lines from academics exploring and putting into practice their own take on What can I do Evaluations of what has and has not worked to drive change at the institutional and individual levels are welcomed iii The disruptors that are already initiating transformations in HE The growth of for profit private providers open access teaching resources and other online approaches that threaten the business models of existing public and nonprofit institutions who struggle to compete with the relevance and just in time education that is becoming available via novel actors We welcome articles exploring the potential for disruption

Cloete, Nico, Bunting, Ian, 2018-11-09 From the early 2000s a new discourse emerged in Africa and the international donor community that higher education was important for development in Africa Within this zeitgeist of converging interests a range of agencies agreed that a different collaborative approach to linking higher education to development was necessary This led to the establishment of the Higher Education Research and Advocacy Network in Africa Herana to concentrate on research and advocacy about the possible role and contribution of universities to development in Africa This book is the final publication to emerge from the Herana project The project has also published more than 100 articles chapters reports manuals and datasets and many presentations have been delivered to share insights gained from the work done by Herana Given its prolific dissemination it seems reasonable to ask whether this fourth and final publication will offer the reader anything new This book is certainly different from previous publications in several respects First it is the only book to include an analysis of eight African universities based on the full 15 years of empirical data collected by the project Second previous books and reports were published mid project This book has benefited from an extended gestation period allowing the authors and contributors to reflect on the project without the distractions associated with managing and participating in a large scale project For the first time some of those who have been involved in Herana since its inception have had the opportunity to at least make an attempt to see part of the wood for the trees Different does not necessarily mean new An emphasis on the newness of the data and perspectives presented in this book is important because it shows that it is more than a historical record of a donor funded project Rather each chapter in this book brings to a lesser or greater extent something new to our understanding of universities research and development in Africa

the growing polarisation of South African society he resigned in 1986 to explore democratic alternatives to the impasse into which the country had been led under apartheid Largely side lined during the democratic transition he continued to pursue a broad range of initiatives aimed at building democracy empowering black South Africans and transforming the economy Albert Grundlingh's penetrating biographical study offers sharp insights into the thinking and motivation of this most unlikely politician Concise but wide ranging Slabbert Man on a Mission provides new perspectives on a figure who even today remains something of an enigma
