13.1 INTRODUCTION

In the field of education, interdependence of teaching, learning and testing is recognised. The first step in the teaching-learning process is defining and determining the objectives of learning and the outcomes to be expected from classroom instruction. In the light of these processes, the main reliance is placed on tests which are constructed by teachers. Through these tests you can see as to how well your students have mastered the unit of instruction. But when we want to compare achievement of an individual with a group, class and school or study the student growth over a period of time to know whether the progress is more or less rapid than might be expected, standardized tests are used. Both the standardized and the teacher-made tests are important. So you are expected to know the list of achievement tests made in the country and abroad. In this unit, we discuss as to why traditionally students have been labeled as underachievers or overachievers on the basis of their academic achievement. You will also learn that as to when and how the achievement tests should be used.

13.2 OBJECTIVES

After going through this unit, you should be able to:

- discuss the concept of a standardized achievement test,
- describe as to how standardized tests could be used,
- differentiate between standardized and teacher-made tests,
- compile a list of available achievement tests batteries, and
- differentiate between achievement tests and aptitude tests.
