

Unit 24- Store and Retrieve Information

Outcome 1- Understand information storage and retrieval

Describe systems and procedures for storing and retrieving information. Explain how to create filing systems to facilitate information identification and retrieval. Describe how to use different search techniques to locate information

There are at least 3 obvious ways that you can store information. The first would be physical; using a paper filing system, the second would be electronically; using a device such as a computer hard drive, computer program, USB Stick, CD etc., and the third way is online, using a website that allows only you or/and specific individuals to view.

The Physical way of storing information can range from using a filing cabinet, where documents and other information are stored alphabetically, or using page dividers to separate information by topic/genre. This method is frequently used in offices to store employee files, customer records, company policies, contracts or procedures. For example, employee files are easy to retrieve because they are normally sorted in alphabetical order of surname, while they are usually kept in a known location so that the relevant employees can access them. Similarly, employee and client records are stored in the office, in alphabetical order, which allows me and other individuals to view and edit the records. Other than this, documents regarding private client's jobs (job sheets), which need to be at hand for me or Alison are sometimes stored in a filing cabinet with labels stuck on the outside of the drawers. Overall everything is and always should be easily located.

The second method, that of storing information electronically, is used for a wide range of documents and data. Using this method means that large amounts of information can be stored without taking up our limited office space. Several companies have shared areas on computers that employees have access to, we do this also, meaning that we all can view files such as calendars, up to date policies, procedures, invoices, payer notices etc. This information is stored in separate folders based on the content for a more efficient storage retrieval. Other than this, in the top right hand corner of your control panel, there is a search bar. If for example I was looking for a invoice, I would type the invoice number in the search bar and the computer would search through the hundreds of
