Humanity has extensively exploited natural and physical resources since the Industrial Revolution in Europe A geological era now called the Anthropocene has been coined in environmental and developmental circles to mark the increased domination of humanity on Earth and its resources Today the ecological footprint on the fragile planet continues to increase Mass industrialisation like what China is doing and pushing for is one of the drivers for increased urbanisation that results in increased demand for land It is also the stimulus behind increased deforestation overfishing and pollution As the fragility of the Earth increases global bodies like the Intergovernmental Panel on Climate Change are pushing to reduce the Earth s temperature Human efforts to manage the problem cascade from a global to a regional to a national as well as to much localised scales Missing though are nuanced contributions at national and community levels which this book is an attempt to bridge The nagging sense of responsibility is what this book explores under the label of sustainability ethic As a case study the book examines the use of sustainability ethic in the management of the physical infrastructural and natural resources of Zimbabwe This ethic is built on pillars that include participation of people households in their pursuit for sustainable livelihoods appropriate technology tools and techniques for environmental protection It also hinges on stewardship and structures institutions policies and processes of governance and sustainability There are also the aspects of ethics laws and indigenous technical knowledge for sustainability capacity building and education plans and programmes for sustainability and population and demographic determinants processes and outcomes for sustainability The book is a timely contribution to an urgent global concern and climate change debate **Spatial Resilience in Social-Ecological Systems** Graeme S.

Cumming,2011-02-09 Spatial Resilience is a new and exciting area of interdisciplinary research It focuses on the influence of spatial variation including such things as spatial location context connectivity and dispersal on the resilience of complex systems and on the roles that resilience and self organization play in generating spatial variation Prof Cumming provides a readable introduction and a first comprehensive synthesis covering the core concepts and applications of spatial resilience to the study of social ecological systems The book follows a trajectory from concepts through models methods and case study analysis before revisiting the central problems in the further conceptual development of the field In the process the author ranges from the movements of lions in northern Zimbabwe to the urban jungles of Europe and from the collapse of past societies to the social impacts of modern conflict The many case studies and examples discussed in the book show how the

concept of spatial resilience can generate valuable insights into the spatial dynamics of social ecological systems and contribute to solving some of the most pressing problems of our time Although it has been written primarily for students this book will provide fascinating reading for interdisciplinary scientists at all career stages as well as for the interested public Graeme Cumming central in the development of resilience thinking and theory has produced a wonderful book on spatial resilience the first ever on this topic The book will become a shining star a classic in the explosion of new ideas and approaches to studying and understanding social ecological systems Carl Folke Stockholm Resilience Centre Sweden

Manderson, Carolyn Smith-Morris, 2010-05-13 *Chronic Conditions Fluid States* explores the uneven impact of chronic illness and disability on individuals families and communities in diverse local and global settings To date much of the social as well as biomedical research has treated the experience of illness and the challenges of disease control and management as segmented and episodic Breaking new ground in medical anthropology by challenging the chronic acute divide in illness and disease the editors along with a group of rising scholars and some of the most influential minds in the field address the concept of chronicity an idea used to explain individual and local life worlds question public health discourse and consider the relationship between health and the globalizing forces that shape it *Human-Animal Relations in Tourism, Leisure and Development* Carlos Monterrubio, Xavier López-Medellín, Katherine Dashper, Helen Wadham, 2025-04-17 Humans and animals have developed multiple and complex interactions in the fields of tourism leisure and development However much of the existing research on how humans and animals interact in these fields has emerged from within the context of developed countries As a result little has been documented about human animal interactions in the socioeconomic cultural and environmental contexts of countries in the Global South Specifically the diversity and complexity of interspecies relationships in tourism leisure and local development in Latin America have been largely ignored in Anglo Saxon literature This has resulted in a limited partial and hegemonic understanding and debate about human animal relationships globally dominated by certain regions of the world This book addresses this gap by documenting multiple and complex relationships between humans and animals in the fields of tourism leisure and local development in countries in Latin America [Bibliographic Guide to Black Studies](#) Schomburg Center for Research in Black Culture, 1997 [Outpost](#) , 2006 **Bibliographic Guide to Government Publications** New York Public Library.
