Neural Network Modeling and Identification of Dynamical Systems Yury Tiumentsev, Mikhail Egorchev, 2019-05-17 Neural Network Modeling and Identification of Dynamical Systems presents a new approach on how to obtain the adaptive neural network models for complex systems that are typically found in real world applications The book introduces the theoretical knowledge available for the modeled system into the purely empirical black box model thereby converting the model to the gray box category This approach significantly reduces the dimension of the

resulting model and the required size of the training set This book offers solutions for identifying controlled dynamical systems as well as identifying characteristics of such systems in particular the aerodynamic characteristics of aircraft Covers both types of dynamic neural networks black box and gray box including their structure synthesis and training Offers application examples of dynamic neural network technologies primarily related to aircraft Provides an overview of recent achievements and future needs in this area

Robust and Fault-Tolerant Control Krzysztof Patan, 2019-03-16 Robust and Fault Tolerant Control proposes novel automatic control strategies for nonlinear systems developed by means of artificial neural networks and pays special attention to robust and fault tolerant approaches The book discusses robustness and fault tolerance in the context of model predictive control fault accommodation and reconfiguration and iterative learning control strategies Expanding on its theoretical deliberations the monograph includes many case studies demonstrating how the proposed approaches work in practice The most important features of the book include a comprehensive review of neural network architectures with possible applications in system modelling and control a concise introduction to robust and fault tolerant control step by step presentation of the control approaches proposed an abundance of case studies illustrating the important steps in designing robust and fault tolerant control and a large number of figures and tables facilitating the performance analysis of the control approaches described The material presented in this book will be useful for researchers and engineers who wish to avoid spending excessive time in searching neural network based control solutions It is written for electrical computer science and automatic control engineers interested in control theory and their applications This monograph will also interest postgraduate students engaged in self study of nonlinear robust and fault tolerant control
