For Exercises 1–3, help students understand that they need to find ways to pack bolts according to the amount each container can hold to make 3,140 bolts.

- Why is it helpful to know different ways to represent the same number? Possible answer: you can use different combinations of tens, hundreds, or thousands, depending on the situation.

On Your Own • Independent Practice

For Exercises 4–8, students will represent numbers using the fewest crates, boxes, cases, bags, and single bolts. Point out that the chart includes the headings ten thousands, thousands, hundreds, tens, and ones.

- Why do you think the chart has two different headings in the columns? Possible answer: ten thousands, thousands, hundreds, tens, and ones are reminders for the number of bolts in each container.
- If there are zero boxes of 1,000 to pack 8,416 bolts, what happens to the number of cases of 100 you'll need? Explain. Possible answer: you need more cases of 100. 8 thousands is the same as 80 hundreds, so use 80 hundreds.

Problem Solving

UNLOCK THE PROBLEM For Exercise 9, refer students to the Remember box for the number of bolts each type of container can hold.
