Strategic Modelling and Business Dynamics John Morecroft, 2007-09-10 John Morecroft's book is an ideal text for students interested in system modelling and its application to a range of real world problems The book covers all that is necessary to develop expertise in system dynamics modelling and through the range of applications makes a persuasive case for the power and scope of the approach As such it will appeal to practitioners as well as students Robert Dyson Professor of Operational Research Associate Dean Warwick Business School Much more than an introduction

John Morecroft's Strategic Modelling and Business Dynamics uses interactive management flight simulators to create an engaging and effective learning environment in which readers whatever their background can develop their intuition about complex dynamic systems. The numerous examples provide a rich test bed for the development of systems thinking and modelling skills. John Sterman, Jay W. Forrester, Professor of Management, MIT Sloan School of Management. This book with its vivid examples and simulators will help to bring modelling system dynamics and simulation into the mainstream of management education where they now belong. John A. Quelch, Professor of Marketing, Harvard Business School. Former Dean of London Business School. This text fills the gap between texts focusing on the purely descriptive systems approach and the more technical system dynamics ones. Ann van Ackere, Professor of Decision Sciences, HEC Lausanne, Université de Lausanne. Strategic modelling based on system dynamics is a powerful tool for understanding how firms adapt to a changing environment. The author demonstrates the appeal and power of business modelling to make sense of strategic initiatives and to anticipate their impacts through simulation. The book offers various simulators that allow readers to conduct their own policy experiments. Dr. Erich Zahn, Professor of Strategic Management, Betriebswirtschaftliches Institut, University of Stuttgart. A website to accompany the book can be found at www.wiley.com/college/morecroft housing supplementary material for both students and lecturers.

Strategic Modelling and Business Dynamics John D. W. Morecroft, 2015-05-27. Insightful modelling of dynamic systems for better business strategy. The business environment is constantly changing and organisations need the ability to rehearse alternative futures. By mimicking the interlocking operations of firms and industries, modelling serves as a dry run for testing ideas, anticipating consequences, avoiding strategic pitfalls and improving future performance. Strategic Modelling and Business Dynamics is an essential guide to credible models helping you to understand modelling as a creative process for distilling and communicating those factors that drive business success and sustainability. Written by an internationally regarded authority, the book covers all stages of model building from conceptual to analytical. The book demonstrates a range of in-depth practical examples that vividly illustrate important or puzzling dynamics in firm operations, strategy, public policy and everyday life. This updated new edition also offers a rich Learners website with models, articles and videos as well as a separate Instructors website resource with lecture slides and other course materials. See Related Websites Extra section below. Together the book and websites deliver a powerful package of blended learning materials that introduce the system dynamics approach of modelling strategic problems in business and society. Include industry examples and public sector applications with interactive simulators and contemporary visual modelling software. Provide the latest state of the art thinking, concepts and techniques for systems modelling. The comprehensive Learners website features models, microworlds, journal articles and videos. Easy to use simulators enable readers to experience dynamic complexity in business and society. Like would-be CEOs, readers can re-design operations and then re-simulate in the quest for well-coordinated strategy and better performance. The simulators include a baffling hotel

System Dynamics for Complex Problems in Pavement Engineering Rajib Mallick,2023-03-31

Increasingly segments of the civil infrastructure are considered to be parts of larger systems which requires a systems approach for a fuller and proper understanding of and solutions to problems Unfortunately the subject of a system or a systems approach is barely covered in a standard civil and environmental engineering curriculum Most if not all civil engineering problems involve interdependency and hence segmented approaches of learning one individual topic at a time make it difficult for students to learn understand and apply rational concepts for the design construction and maintenance of larger infrastructure components System Dynamics for Complex Problems in Pavement Engineering presents an introduction to a systems approach to help readers evolve and develop their capabilities of learning communicating and researching through system dynamics modeling and experimentation Furthermore it helps students appreciate the need for systems thinking in modeling analyzing and proposing solutions for multidisciplinary problems in pavement engineering

The Philosopher's Stone for Sustainability Yoshiki Shimomura,Koji Kimita,2012-09-26 Industrial Product Service Systems IPS2 which is defined as an integrated industrial product and service offering that delivers value in use has expanded rapidly over the last decade IPS2 has allowed us to achieve both high added value and high productivity and has enriched our QOL by improving the performance of products and services We are now struggling with many awkward issues related to sustainability but IPS2 is expected to be the philosopher s stone for solving these issues Following the pattern of conferences held in Cranfield in 2009 Link ping in 2010 and Braunschweig in 2011 the fourth International CIRP Conference on Industrial Product Service Systems held on November 8 9 2012 in Tokyo will cover various aspects of IPS2 Topics planned for this year s conference reflect the latest IPS2 information in both the natural sciences and humanities and include case studies from

various industries IPS2 is still a relatively new field so it is important to keep track of the entire context in order to promote more cross sectional cooperation between multimodal fields and disciplines The fourth International CIRP Conference on Industrial Product Service Systems will serve as a vital platform for such collaborations and the discussion of new scientific ideas

Strategic Thinking Illustrated Dennis Sherwood, 2022-10-14 This book is about the behaviour of systems Systems are important for we interact with them all the time and many of the actions we take are influenced by a system for example the system of performance measures in an organisation influences often very strongly how individuals within that organisation behave Furthermore sometimes we are involved in the design of systems as is any manager contributing to the definition of what those performance measures might be That manager will want to ensure that all the proposed performance measures will drive the right behaviours rather than inadvertently encouraging dysfunctional game playing and so anticipating how the performance measurement system will work in practice is a vital part of a wise design process Some of the systems with which we interact are local such as your organisation's performance measurement system Some systems however are distant but nonetheless very real such as the healthcare system the education system the legal system and the climate system Systems therefore exist on all scales from the local to the global And all systems are complex some hugely so That's why understanding how systems behave can be very helpful Systems are complex for two main reasons First the manner in which they behave over time can be very hard to anticipate and anticipating the future sensibly is of course a key objective of management Second the entities within a system can be connected together in very complex ways so that an intervention here can result in an effect there perhaps a long time afterward Sometimes this can be surprising and so we talk of unintended consequences but this is of course a euphemism for because I didn't understand how this system behaves I had not anticipated that Systems thinking the subject matter of this book is the disciplined study of systems and causal loop diagrams the pictures of this picture book are a very insightful way to represent the connectedness of the entities from which any system is composed so taming that system's complexity

Value Management

Roger H. Davies,2016-02-17 Change programmes in both private and public sectors have a poor record of delivering their intended value The reasons given most often for their failure include lack of executive support or buy in from key users loose requirements definition weak programme management and plain wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a change programme deliver when and in what order so as to cause intended value against a defined purpose with speed and certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the programme remains on purpose and on value and two answers to be given Target time and align change programmes to deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic value achieved
