Friction with Fractions Fathma Mir, 1996 **Fractions** Daphne Kerslake, 1986 This report describes an investigation in England of some of the problems children experience with fractions In particular the restricted view that some children have of fractions is investigated The methodology involved a large number of interviews with secondary school children aged 12 14 The results of these interviews led to the design of teaching experiments which involved both small groups and whole classes with a pretest immediate posttest and delayed posttest Results of the study address student understanding of models of fractions the division aspect of a fraction fractions as numbers and equivalent fractions as well as the teaching module that was developed Implications for the teaching of fractions include 1 the learning of fractions would be facilitated if teachers developed their skills of listening to children and of encouraging them to talk about their interpretation of fractions and associated problems 2 a greater emphasis could be placed on the division interpretation of fractions 3 more attention needs to be given to the basic ideas of equivalence of fractions 4 more attention needs to be given to the limitation of the part of a whole model of a fraction and 5 more attention needs to be paid to the importance of the transition from the realm of counting numbers to that of rational numbers

Appendices include the interview and testing materials PK Large-Scale Studies in Mathematics Education James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning

developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them. This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies. **Good**
