The wind intensity is 1.3 kN/m^2 on projected area and specific weight of masonry is 22 kN/m^3 . Calculate maximum and minimum intensities of stresses at the base of the chimney.

7. (a) A beam 8.5 m long rest on supports 5 m apart the beam carries the load as shown in figure.

Draw the S.F. and B.M. dig. and state the all important point including points of contraflexure.

- (b) A beam AB supported at its ends has a span of 2 m and carries a udl of 200 kN/m over the entire span. The C.S. of the beam is a T-section, having flange width 125 mm, flange thickness 25 mm, web thickness 25 mm and overall depth 200 mm. Calculate the maximum shear stress in the beam and draw shear stress distribution marking important values.

Basheer Al-Naib,2018-09-19 Porous ceramics have recently gained growing importance in industry because of their many applications like filters absorbers dust collectors thermal insulation hot gas collectors dielectric resonators bioreactors bone replacement and automobile engine components Generally porous ceramics have good properties such as mechanical strength abrasion resistance and chemical and thermal stability These porous network

ceramic structures also have relatively low density low mass and low thermal conductivity Furthermore permeability is one of the most important properties of porous ceramics for different applications such as membranes because this property directly relates to the pressure drop during filtration Pore size control is one key factor in fabrication of porous ceramics The size of particles and their distribution of the raw materials manufacturing techniques types of binder used distribution of binder and sintering affect the final porosity and pore connectivity are important things that must be considered during the manufacturing of a porous ceramic body Therefore the development of porous ceramic research requires sufficient mechanical and chemical stability as well as permeability This book covers a wide range of topics such as porous ceramic structure and properties preparation simulation and fabrication sintering applications for bioceramics sensors magnetics and energy saving
