Student Exploration

Venus is often called Earth's "twin planet" because it is the second planet nearest and closest the same size. Venus, Earth, Mars, and Pluto are circled in the atmosphere that are identical looking ones.

But that is where the similarities end. The atmosphere of Venus is about 96% carbon dioxide. This results in a greenhouse effect on Earth's side, and the surface temperature of Venus is about 460°C, hot enough to melt lead!
