1. What are the objectives for this experiment? (you can summarize)
2. Make a hypothesis about how you think the two species of <i>Paramecium</i> will grow alone and how they will grow when they are grown together. I think they both will grow more rapidly than together. Together they will overload the carrying capacity.
3. Explain how you tested your hypothesis. I ran three samples, each separate and then together, and test the growth rate every two days.
4. On what day did the <i>Paramecium caudatum</i> population reach the carrying capacity of the environment when it was grown alone? How do you know?

Evolutionary Feedbacks Between Population Biology and Genome Architecture Tariq Ezaz, Scott V. Edwards, 2018-12-06 This eBook presents all 10 articles published under the Frontiers Research Topic Evolutionary Feedbacks Between Population Biology and Genome Architecture edited by Scott V Edwards and Tariq Ezaz With the rise of rapid genome sequencing across the Tree of Life challenges arise in understanding the major evolutionary forces influencing the structure of microbial and eukaryotic genomes in particular the prevalence of natural selection versus genetic drift in shaping those genomes Additional complexities in understanding genome architecture arise with the increasing incidence of interspecific hybridization as a force for shaping genotypes and phenotypes A key paradigm shift facilitating a more nuanced interpretation of genomes came with the rise of the nearly neutral theory in the 1970s followed by a greater appreciation for the contribution of nonadaptive forces such as genetic drift to genome structure in the 1990s and 2000s The articles published in this eBook grapple with these issues and provide an update as to the ways in which modern population genetics and genome informatics deepen our understanding of the subtle interplay between these myriad forces From intraspecific to macroevolutionary studies population biology and population genetics are now major tools for understanding the broad landscape of how genomes evolve across the Tree of Life This volume is a celebration across diverse taxa of the contributions of population genetics thinking to genome studies We hope it spurs additional research and clarity in the ongoing search for rules governing the evolution of genomes

Revolutionizing K-12 Blended Learning through the i²Flex Classroom

Model Avgerinou, Maria D.,Gialamas, Stefanos P.,2016-06-20 Blended learning has gained significant attention recently by educational leaders practitioners and researchers i Flex a variation of blended learning is based on the premise that certain non interactive teaching activities such as lecturing can take place by students without teachers direct involvement Classroom time can then be used for educational activities that fully exploit teacher student and student student interactions allowing for meaningful personalized feedback and scaffolding on demand Revolutionizing K 12 Blended Learning through the i Flex Classroom Model presents a well rounded discussion on the i Flex model highlighting methods for K 12 course design delivery and evaluation in addition to teacher performance assessment in a blended i Flex environment Emphasizing new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers this publication is an essential reference source for pre service and in service teachers researchers administrators and educational technology developers

Computational Techniques for Biological Sequence Analysis

Saiyed Umer,Ranjeet Kumar Rout,Monika Khandelwal,Smitarani Pati,2025-06-17 This book provides an overview of basic and advanced computational techniques for analyzing and understanding protein RNA and DNA sequences It covers effective computing techniques for DNA and protein classifications evolutionary and sequence information analysis evolutionary algorithms and ensemble algorithms Furthermore the book reviews the role of machine learning techniques artificial intelligence ensemble learning and sequence based features in predicting post translational modifications in proteins DNA methylation and mRNA methylation along with their functional implications The book also discusses the prediction of protein protein and protein DNA interactions protein structure and function using computational methods It also presents techniques for quantitative analysis of protein DNA interactions and protein methylation and their involvement in gene regulation Additionally the use of nature inspired algorithms to gain insights into gene regulatory mechanisms and metabolic pathways in human diseases is explored This book acts as a useful reference for bioinformaticians and computational biologists working in the fields of molecular biology genomics and bioinformatics Key Features Reviews machine learning techniques for DNA sequence classification and protein structure prediction Discusses genetic algorithms for analyzing multiple sequence alignments and predicting protein protein interaction sites Explores computational methods for quantitative analysis of protein DNA interactions Examine the role of nature inspired algorithms in understanding the gene regulation and metabolic pathways Covers evolutionary algorithms and sequence based features in predicting post translational modifications

Radiobiology Paul N. Schofield, Carmel E. Mothersill, 2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chornobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chornobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology
