Practitioner's Guide to the Interpretation of Complex DNA Profiles places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature. The book begins with an introduction to basic forensic genetics covering a brief historical description of the development and harmonization of STR markers and national DNA databases. The laws of statistics are described along with the likelihood ratio based on Hardy Weinberg equilibrium and alternative models considering sub structuring and relatedness. The historical development of low template mixture analysis theory and practice is also described so the reader has a full understanding of rationale and progression. Evaluation of evidence and statement writing is described in detail along with common pitfalls and their avoidance. The authors have been at the forefront of the revolution having made substantial contributions to theory and practice over the past two decades. All methods described are open source and freely available supported by sets of test data and links to web sites with further information. This book is written primarily for the biologist with little or no statistical training. However sufficient information will also be provided for the experienced statistician. Consequently the book appeals to a diverse audience. Covers short tandem repeat STR analysis including database searching and massive parallel sequencing both STRs and SNPs. Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity. Written by authors intimately involved with software development training at international workshops and reporting cases worldwide using the methods described in this book. This guide has it all and it will help you ensure that your book club meetings are both fun and educational.

Focusing on children in grades 3-8 and their families the book offers 100 ready-made book club instructions for popular children's and YA titles from newer releases such as Theresa Nelson's *Ruby Electric* and Blue Balliett's *Chasing Vermeer* to perennial favorites and award-winning classics such as Johanna Hurwitz's *Much Ado about Aldo* and Gary Soto's *Baseball in April* and *Other Stories*. Along with thought-provoking discussion questions you'll find all the background information you need to conduct lively book discussions with a variety of readers: plot summary, themes and characters description, genre, reading level, author and award information, related reads and more. The guide describes four types of family-oriented book clubs: family, mother-daughter, father-son, and readers' rap, as well as a book club for kids only. The author provides practical instructions for making each type of book club successful. For each title she provides a plot summary, characterization sketches, questions to use for provocative discussion, and follow-up bibliographies on similar reads. Notes on genres, themes, and reading levels are also provided. The selected titles reflect some of the best, most current and most popular children's literature. In addition, a broad scope of genres and multicultural titles are included. Perfect for public library programs and after-school book clubs, this is a one-stop resource with practical, ready-made plans that can easily be adapted to multiple environments.
