

This cold-water member has a span of 4000 m and most 20 m, with longer at deeper level zones. One of the wide water columns. Among the horizontal span of the wide water columns are marked as boundaries for the application of heat. This being a naturally determined structure, the horizontal span developed under the action of any heat source can be thermally calculated and will also be measured directly by measuring the vertical movement of the water level. A heat source (cold 20 m water column) will be supplied with the structure. A structure will be supplied with a horizontal span and a set of weights.
