Two-dimensional Navier-Stokes Solution of the Flow Over a Thick Supercritical Airfoil with Strong Shock-induced Separation Don W. Kinsey, 1988 This report describes a numerical solution of the Navier Stokes equations for transonic flow over a thick supercritical airfoil with strong shock induced separation on both the upper and lower surfaces The separated flow region extends from the shock approximately 50% chord to the trailing edge on both surfaces The report first reviews the processes involved in producing a computational solution of the Navier Stokes equations for a
