Reconstruction, Replication and Re-enactment in the Humanities and Social Sciences Sven Dupré, Anna Harris, Julia Kursell, Patricia Lulof, Maartje Stols-Witlox, 2025-10-01. Performative methods are playing an increasingly prominent role in research into historical production processes, materials, bodily knowledge, and sensory skills, and in forms of education and public engagement in classrooms and museums. This book offers for the first time sustained interdisciplinary reflections on performative methods, variously known as Reconstruction, Replication, and Re-enactment (RRR) practices across the fields of history of science, archaeology, art history, conservation, musicology, and anthropology. Each of these fields has distinct histories, approaches, tools, and research questions. Researchers in the historical disciplines have used reconstructions to learn about the materials and practices of the past, while anthropologists and ethnographers have more often studied the re-enactments themselves, participating in these performances as engaged observers. In this book, authors bring their experiences of RRR practices within their discipline into conversation with RRR practices in other disciplines, providing a basis for interdisciplinary cross-fertilization.

Researching Trust and Health Julie Brownlie, Alexandra Greene, Alexandra Howson, 2008-05-16. There is currently a lively debate ongoing in society about the nature of trust and the conditions necessary to establish and sustain it. Given the role of trust in bridging uncertainty, it is perhaps not surprising that as our consciousness of risk has increased, the role and nature of trust in social practices has come under growing scrutiny. These developments are particularly relevant to health because participation in health practices is arguably based on and engendered through trust. There is thus a need for empirically based research which intelligently unravels this complexity to support all stakeholders in the health arena. This multidisciplinary volume of work addresses this gap by contributing substantively to the exploration of trust in the experience, practice, and organization of health. It offers an overview of recent scholarship based on empirical research which explores the significance of trust in relation to key health-related issues. At the same time, this text examines conceptual

themes in relation to trust more generally including the relationship between trust and auditing consent expert knowledges and social capital *The Vigilant Citizen* Thijs Jeurssen,2023-01-10 In the context of the hyperviolent and racialized policing of cities across the US today vigilant citizenship frames everyday policing as matters of personal blame and guilt as problems of citizens *Spatial Differentiation in the Social Impact of Technology* Dirk-Jan F. Kamann,1988 *Museums and the Construction of Disciplines* Christopher Whitehead,2013-11-20 Museums and museum politics were important elements in the development of the disciplines of Archaeology and Art History in nineteenth century Britain Here Christopher Whitehead explores some of the key debates and events which led to the conceptual differentiation and physical separation of archaeological and artistic material culture looking especially at the ways in which objects and histories were contested within museum politics For example in the 1850s the status of Egyptian antiquities as art or archaeology was keenly debated and this related closely to questions about which kinds of museum should house them and the possible histories and epistemologies in which they might figure This concise study serves as a basis for a discussion of the continued intellectual legacy of this for our understanding management and presentation of the past in the museum and in curricula It is argued that by understanding the politics and circumstances through which the two disciplines were delimited and distinguished from one another we may be able to glimpse retrospectively the possibility of alternative art histories and alternative archaeologies *The Visualised Foetus* Julie Roberts,2016-02-17 The latest three and four dimensional images produced by modern ultrasound technology offer strikingly realistic representations of the foetus representations that have further transformed experiences of pregnancy the public understanding of foetal existence and the rhetoric of the abortion debate Presenting a timely feminist engagement with this new technology *The Visualised Foetus* explores the widespread familiarity with and popularity of this new technology within the context of a longer history of foetal visualisations The book offers an array of case studies that examine the diffusion of 3 4D ultrasound images beyond the clinic and the implications of this new technology for biopolitics in the European and American context With attention to the non diagnostic and commercial use of 3 4D images the impact of 3 4D ultrasound within the abortion debate and new claims that ultrasound aids maternal foetal bonding *The Visualised Foetus* demonstrates the tension between the social and medical significances of foetal ultrasound the pleasures and dangers of foetal imagery for women the contested status of ultrasonography as scientific imagery and struggles over the authority to define and interpret ultrasound imagery As such it will appeal to scholars of the sociology of medicine and the body social theory and gender and cultural studies as well as those with interest in science and technology studies **Mastering Augmented Reality Development with Unity** Indika Wijesooriya,2023-08-11 A comprehensive guide to building augmented reality applications with Unity 3D KEY FEATURES Apply the fundamental principles of 3D design to create engaging and interactive augmented reality experiences Learn how to use Unity to work with a variety of AR frameworks and tools Gain the competitive edge by learning how to use APIs to build cutting edge AR applications
