Knowledge, Space, Economy John Bryson, Peter Daniels, Nick Henry, Jane Pollard, 2002-01-04 We are now living through a period of knowledge capitalism in which as Castells put it the action of knowledge upon knowledge is the main source of productivity In the face of such transformation the economic social and institutional contours of contemporary capitalism are being reshaped At the heart of this world are an emergent set of economies regions institutions and peoples central of the flows and translations of knowledge This book provides an interdisciplinary review of the triad of knowledge space economy on entering the twenty first century Drawing on a variety of disciplinary backgrounds the first part of the book comprises a set of statements by leading authors on the role of knowledge in capitalism Thereafter the remaining two parts of the book explore the landscape of knowledge capitalism through a series of analyses of knowledge in action within a range of economic political and cultural contexts Bringing together a set of authors from across the social sciences this book provides both a major theoretical statement on understanding the economic world and an empirical exemplification of the power of knowledge in shaping the spaces and places of today s society **Proton Therapy and Radiosurgery** Hans Breuer, Berend J. Smit, 2013-04-17 The book is divided into two parts Part I deals with the relevant physics and planning algorithms of protons H Breuer and Part II with the radiobiology radiopathology and clinical outcomes of proton therapy and a comparison of proton therapy versus photon therapy BJ Smit Protons can be used for radiosurgery and general radio therapy Since proton therapy was first proposed in 1946 by Wilson about sixteen facilities have been built globally Only a very few of these

have isocentric beam delivery systems so that proton therapy is really only now in a position to be compared directly by means of randomised clinical trials with modern photon radiotherapy therapy systems both for radiosurgery and for general fractionated radiotherapy Three dimensional proton planning computer systems with image fusion image of computerised tomography CT magnetic resonance registration capabilities imaging MRI stereotactic angiograms and perhaps positron emission tomography PET are essential for accurate proton therapy planning New planning systems for spot scanning are under development Many of the older comparisons of the advantageous dose distributions for protons were made with parallel opposing or multiple co planar field arrangements which are now largely obsolete New comparative plans are necessary once more because of the very rapid progress in 3 D conformal planning with photons New cost benefit analyses may be needed Low energy about 70 MeV proton therapy is eminently suitable for the treatment of eye tumours and has firmly established itself as very useful in this regard
