Shape in Picture Ying-Lie O, Alexander Toet, David Foster, Henk J.A.M. Heijmans, Peter Meer, 2013-04-17. The fields of image analysis computer vision and artificial intelligence all make use of descriptions of shape in grey level images. Most existing algorithms for the automatic recognition and classification of particular shapes have been developed for specific purposes with the result that these methods are often restricted in their application. The use of advanced and theoretically well founded mathematical methods should lead to the construction of robust shape descriptors having more general application. Shape description can be regarded as a meeting point of vision research mathematics computing science and the application fields of image analysis computer vision and artificial intelligence. The NATO Advanced Research Workshop Shape in Picture was organised with a twofold objective: first it should provide all participants with an overview of relevant developments in these different disciplines; second it should stimulate researchers to exchange original results and ideas across the boundaries of these disciplines. This book comprises a widely drawn selection of papers presented at the workshop and many contributions have been revised to reflect further progress in the field. The focus of this collection is on mathematical approaches to the construction of shape descriptions from grey level images. The book is divided into five parts each devoted to a different discipline. Each part contains papers that have tutorial sections; these are intended to assist the reader in becoming acquainted with the variety of approaches to the problem.

Flow Engineering Steve Pereira, Andrew Davis, 2024-05-14. Tired of misalignment friction and stalled workflow? Flow Engineering is a practical guide to using value stream mapping techniques to align teams, unlock innovation and optimize performance. Based on foundations from Value Stream Mapping cybernetics and the Toyota Production System, Flow Engineering's lightweight and iterative practices build the value clarity and flow required for effective collaboration and collective action. Written by Value Stream Mapping experts Steve Pereira and Andrew Davis, Flow Engineering provides a step by step guide for running fast paced mapping workshops that rapidly build shared understanding. Using five key maps to facilitate collaborative flow conversations, Pereira and Davis show how teams can surface tangled process dependencies conflicting priorities and unspoken assumptions that grind progress to a halt. The result: A clear roadmap owned by the people doing the work to

accelerate innovation cycles optimize workflows and achieve more effective coordination Applicable across any industry Flow Engineering s techniques have helped leading organizations improve critical workflows like customer onboarding product development and hiring It s time to stop trying one size fits all frameworks to find value clarity and flow to improve culture and performance Flow Engineering meets your organization where it s at and shows you how to move it where it needs to go
