Introduction to Concurrency in Programming Languages Matthew J. Sottile, Timothy G. Mattson, Craig E Rasmussen, 2009-09-28 Illustrating the effect of concurrency on programs written in familiar languages this text focuses on novel language abstractions that truly bring concurrency into the language and aid analysis and compilation tools in generating efficient correct programs It also explains the complexity involved in taking advantage of concurrency with regard to program correctness and performance The book describes the historical development of current programming languages and the common threads that exist among them It also contains several chapters on design patterns for parallel programming and includes quick reference guides to OpenMP Erlang and Cilk Ancillary materials are available on the book's website

Specification of Parallel Algorithms Guy E. Blelloch, K. Mani Chandy, Suresh Jagannathan, 1994 This volume contains papers presented at the DIMACS workshop on Specification of Parallel Algorithms held in May 1994 at Princeton University. The goal of the workshop was to bring together some of the best researchers in parallel languages, algorithms, and systems to present and discuss recent developments in their areas of expertise. Among the topics discussed were new specification techniques for concurrent and distributed systems, behavioral and operational specification techniques, new parallel language and system abstractions, novel concurrent architectures and systems, large scale parallel systems, specification tools and environments, and proof techniques for concurrent systems. *ALWAN* Guido Hächler, 1997 *Languages and Compilers for Parallel Computing* Keshav Pingali, 1995-01-26 This volume presents revised versions of the 32 papers accepted for the Seventh Annual Workshop on Languages and Compilers for Parallel Computing held in Ithaca, NY, in August 1994. The 32 papers presented report on the leading research activities in languages and compilers for parallel computing and thus reflect the state of the art in the field. The volume is organized in sections on fine grain parallelism, alignment and distribution, postlinear loop transformation, parallel structures, program analysis, computer communication, automatic parallelization, languages for parallelism, scheduling, and program optimization and program evaluation. **Languages and Compilers for Parallel Computing** Larry Carter, Jeanne Ferrante, 2003-06-29 In August 1999 the Twelfth Workshop on Languages and Compilers for Parallel Computing (LCPC) was hosted by the Hierarchical Tiling Research group from the Computer Science and Engineering Department at the University of California, San Diego (UCSD). The workshop is an annual international forum for leading research groups to present their current research activities and the latest results. It has also been a place for researchers and practitioners to interact closely and exchange ideas about future directions. Among the topics of interest to the workshop are language features, code generation, debugging, optimization, communication, and distributed shared memory, libraries, distributed object systems, resource management, systems integration, of compiler and runtime systems, irregular and dynamic applications, and performance evaluation. In 1999 the workshop was held at the International Relations Pacific Studies Auditorium and the San Diego Supercomputer Center at UCSD. Seventy-seven researchers from Australia, England, France, Germany, Korea, Spain, and the United States attended the workshop, an increase of over 50% from 1998.
