TROUBLESHOOTING

The troubleshooting chart lists common engine symptoms related to problems with the fuel system. It also indicates specific malfunctions in the fuel system which may be causing the problem so it can be isolated more effectively. Before beginning major troubleshooting operations on the fuel system, perform the following operations:

- Disconnect fuel tank hose from the engine. Connect a known good tank and hose and determine if the problem persists.
- Remove and clean the engine fuel filter assembly and replace the filter element.
- Replace filter element in the fuel tank pickup tube.
- Remove and clean the automixing check valve.
- Confirm the anti-siphon valve (if equipped) is functional and of correct design for outboard engine application. Refer to the anti-siphon valve specifications found in Fuel System Requirements.
