Advances in Machine Learning and Data Science Damodar Reddy Edla, Pawan Lingras, Venkatanaresbhabu K., 2018-05-16

The Volume of Advances in Machine Learning and Data Science Recent Achievements and Research Directives constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science LAMDA 2017. The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions. These days we find many computer programs that exhibit various useful learning methods and commercial applications. Goal of machine learning is to develop computer programs that can learn from experience. Machine learning involves knowledge from various disciplines like statistics, information theory, artificial intelligence, computational complexity, cognitive science, and biology. For problems like handwriting recognition, algorithms that are based on machine learning outperform all other approaches. Both machine learning and data science are interrelated. Data science is an umbrella term to be used for techniques that clean data and extract useful information from data. In the field of data science, machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries, financial transactions, medical records, etc. The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science with solutions to problems in the field of image, video, data, and graph processing, pattern recognition, data structuring, data clustering, pattern mining, association rule-based approaches, feature extraction techniques, neural networks, bio-inspired learning, and various machine learning algorithms.

Machine Learning Tom M. Mitchell, Jaime G. Carbonell, Ryszard S. Michalski, 2012-12-06

One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning, which involves the study and development of computational models of learning processes. A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own. The intent of this book is to provide a snapshot of this field through a broad representative set of easily assimilated short papers. As such, this book is intended to complement the two volumes of Machine Learning: An Artificial Intelligence Approach, Morgan Kaufman Publishers, which provide a smaller number of in-depth research papers. Each of the 77 papers in the present book summarizes a current research effort and provides references to longer expositions appearing elsewhere. These papers cover a broad range of topics including research on analogy, conceptual clustering, explanation-based generalization, incremental learning, inductive inference, learning apprentice systems, machine discovery, theoretical models of learning, and applications of machine learning methods. A subject index is provided to assist in locating research related to specific topics. The majority of these papers were collected from the participants at the Third International Machine Learning Workshop held June 24-26, 1985, at Skytop Lodge, Skytop, Pennsylvania. While the list of research projects covered is not exhaustive, we believe that it provides a representative sampling of the best ongoing work in the field and a unique perspective on where the field is and where it is headed.

Judy A. Franklin, Tom M. Mitchell, Sebastian Thrun, 2012-12-06 Recent Advances in Robot Learning contains seven papers on robot learning written by leading researchers in the field As the selection of papers illustrates the field of robot learning is both active and diverse A variety of machine learning methods ranging from inductive logic programming to reinforcement learning is being applied to many subproblems in robot perception and control often with objectives as diverse as parameter calibration and concept formulation While no unified robot learning framework has yet emerged to cover the variety of problems and approaches described in these papers and other publications a clear set of shared issues underlies many robot learning problems Machine learning when applied to robotics is situated it is embedded into a real world system that tightly integrates perception decision making and execution Since robot learning involves decision making there is an inherent active learning issue Robotic domains are usually complex yet the expense of using actual robotic hardware often prohibits the collection of large amounts of training data Most robotic systems are real time systems Decisions must be made within critical or practical time constraints These characteristics present challenges and constraints to the learning system Since these characteristics are shared by other important real world application domains robotics is a highly attractive area for research on machine learning On the other hand machine learning is also highly attractive to robotics There is a great variety of open problems in robotics that defy a static hand coded solution Recent Advances in Robot Learning is an edited volume of peer reviewed original research comprising seven invited contributions by leading researchers This research work has also been published as a special issue of Machine Learning Volume 23 Numbers 2 and 3 *Progress in Artificial Intelligence* Luc Steels, J. This year is also significant for AI in Mexico with the merging of the two major AI conferences into the biennial Mexican International Conference on Artificial Intelligence MICAI series. MICAI is the union of the Mexican National AI Conference RNIA and the International AI Symposium ISAI organized annually by the Mexican Society for AI SMIA since 1984 and by the Monterrey Institute of Technology ITESM since 1988 respectively. The first Mexican International Conference on Artificial Intelligence MICAI 2000 took place April 11-14, 2000 in the city of Acapulco, Mexico.

This conference seeks to promote research in AI and cooperation among Mexican researchers and their peers worldwide. We welcome you all. Over 163 papers from 17 different countries were submitted for consideration to MICAI 2000. After reviewing them thoroughly, MICAI's program committee, referees, and program chair accepted 60 papers for the international track. This volume contains the written version of the papers and invited talks presented at MICAI.
