

TOMATO

GROWING GUIDE

Seed Starting

Plant seeds in soilless potting mix **1/4 inch deep** in containers with drainage holes.

Start seeds **indoors in March or April**.

Keep sprouts in a sunny window or under lights.

If more than one seed sprouts in a container, cut away any extras with scissors at the soil level.

Pot up your plants when they have 3 "true" leaves, or if the sprouts "stall" in growth or turn purple (meaning they are lacking nutrients).

Potting Up

Choose a container big enough for your plant's roots & stem plus room to grow.

Use a **soil mix with compost**.

Transplant deep into the new pot. The soil can come up all the way to the leaves!

Pot up again and again until ready to harden off and transplant outside.

Planting Outside

Plan to transfer outside in April, or, if you live in a sunny microclimate, you can wait until May or June.

Harden off your plants for at least a week or they will not survive outside.

Choose a spot in full sun with at least two square feet of space or a huge pot for each plant.

Add compost or vegetable fertilizer to the planting hole and bury the stem up to the leaves.

Growing

Support indeterminate varieties with large cages. These plants can get to 7 feet.

Do not use any tomato cage smaller than 5 feet in height.

Water consistently. Drip systems are ideal.

Fertilize occasionally with a "vegetable" or "tomato" fertilizer. If the Nitrogen value is too high, you will get many leaves and no flowers.

Tomatoes self-pollinate, but wind and gentle taps can help release pollen.

Harvesting

If you find fruit suffering from Blossom End Rot, observe, and if it doesn't go away after the first few fruit, consider taking steps to treat it.

Check fruit for ripeness by feel, not just color.

Be gentle with picked fruit, and **store on the counter, not in the fridge.**
