Enantioselective Titanium-catalysed Transformations Helene Pellissier, 2016-01-15 Chiral titanium complexes are low cost low toxicity and high efficiency catalysts Impressive progress on enantioselective titanium catalysed transformations has been achieved in the past seven years with exciting new discoveries ranging from basic reactions to novel methodologies Despite this the field has not been substantially reviewed since 2008 This book contains up to date research and covers all types of enantioselective transformations using chiral titanium catalysts It illustrates the economic health and environmental benefits of chiral titanium catalysts showing the types of highly enantioselective reactions that they are able to induce are unlimited Work presented here is aimed at researchers in organic and catalytic chemistry and has been carefully curated to encourage future research possibilities **MotorBoating** ,1981-05 Handbook of Food Engineering Practice Kenneth J.

Valentas, Enrique Rotstein, R. Paul Singh, 1997-07-23 Food engineering has become increasingly important in the food industry over the years as food engineers play a key role in developing new food products and improved manufacturing processes While other textbooks have covered some aspects of this emerging field this is the first applications oriented handbook to cover food engineering processes and manufacturing techniques A major portion of Handbook of Food Engineering Practice is devoted to defining and explaining essential food operations such as pumping systems food preservation and sterilization as well as freezing and drying Membranes and evaporator systems and packaging materials and their properties are examined as well The handbook provides information on how to design accelerated storage studies and determine the temperature tolerance of foods both of which are important in predicting shelf life The book also examines the importance of physical and rheological properties of foods with a special look at the rheology of dough and the design of processing systems for the manufacture of dough The final third of the book provides useful supporting material that applies to all of the previously discussed unit operations including cost profit analysis methods simulation procedures sanitary guidelines and process controller design The book also includes a survey of food chemistry a critical area of science for food engineers **MotorBoating** ,1981-08 MotorBoating ,1981-09 **MotorBoating** ,1981-06 **MotorBoating** ,1981-03

MotorBoating ,1981-04 *MotorBoating* ,1981-07 **Cytotoxic Payloads for Antibody-Drug Conjugates** David E Thurston, Paul J M Jackson, 2019-07-15 Antibody drug conjugates ADCs represent one of the most promising and exciting areas of anticancer drug discovery Five ADCs are now approved in the US and EU i e ado trastuzumab emtansine Kadcyla brentuximab vedotin Adcetris inotuzumab ozogamicin Besponsa gemtuzumab ozogamicin Mylotarg and moxetumomab pasudotox tdfk Lumoxiti and over 70 others are in various stages of clinical development with impressive interim results being reported for many The technology is based on the concept of delivering a cytotoxic payload selectively to cancer cells by attaching it to an antibody targeted to antigens on the cell surfaces This approach has several advantages including the ability to select patients as likely responders based on the presence of antigen on the surface of their cancer cells and a

wider therapeutic index given that ADC targeting enables a more efficient delivery of cytotoxic agents to cancer cells than can be achieved by conventional chemotherapy thus minimising systemic toxicity Although there are many examples of antibodies that have been developed for this purpose along with numerous linker technologies used to attach the cytotoxic agent to the antibody there is presently a relatively small number of payload molecules in clinical use The purpose of this book is to describe the variety of payloads used to date along with a discussion of their advantages and disadvantages and to provide information on novel payloads at the research stage that may be used clinically in the future

Technology and Aging Alex Mihailidis, Jennifer Boger, Henry Kautz, 2008 This publication presents articles on Aging in Place Assistive Technology Monitoring and Telehealth Transportation and Mobility and Design The section on assistive technology AT represents arguably the most mature and generic aspect of technology and aging except that AT can hardly be regarded really as a specific discipline any longer Assistive devices and systems command an expansive gamut of technological and engineering specialties drawing upon mechanical engineering and industrial design at one end of the field and cybernetic systems engineering and brain computer user interfaces at the other The largest section in the book on monitoring and telehealth reveals novel applications of advanced pattern recognition techniques some of which have up to now found roles primarily in the military process engineering and financial sectors Transportation and mobility still represents by far the largest and most commercially lucrative market segment of technology for seniors There is however a clear trend towards synthesis of information and communication technologies ICT and mobility technologies which is embodied in the latest developments of automatic collision avoidance and full or semi autonomous navigation functions in powered mobility devices The last section is dedicated to design issues It is proposed that designing for the special needs market before making a design as inclusive as possible to the mainstream market is a viable alternative to the currently accepted notion of inclusive design provided that aesthetics are appropriately addressed To conclude we see a social shift from institutional to home based care in which information communication technology based solutions now afford the possibility of aging in place for the many thousands of people having mild to moderate cognitive impairment

Rheological Measurement A.A. Collyer,D.W. Clegg,2013-06-29 In many cases rheological measurements are carried out in the simplest of geometries but the interpretation involved in obtaining the rheological parameters of the test fluids from these measurements is surprisingly complex The purpose of this book is to emphasise the points on which most workers in the field agree and to let the authors deal with the contentious points according to their own beliefs and experience This work represents a summary of the current thought on rheological measurement by experts in the various techniques When making measurements and obtaining from them parameters that describe the flow behaviour of the test fluids it is essential that the experimentalist understands the underlying theory and shortcomings of the measurement technique that he is aware of the likely microstructure of the fluid and that from this he can appreciate how the fluid and the measuring system will interact with each other It is this interaction that gives both the required rheological parameters of the fluids and the artefacts that confuse the issue This book covers the main rheological measurement techniques from capillary slit and stretching flows to rotational and oscillatory rheometry in various geometries including sliding plate measurements These topics are backed up by chapters on more practical aspects such as commercial instruments and on computer control and data acquisition The chapters deal with the basic methods how the measurements are taken and what assumptions and interpretations are made to obtain valid data on the test fluids
