How it works:

With the rear wheel stopped, all gears and clutch drum are also stopped. As the centrifugal 1st speed 3-shoe clutch, which is solid with the turning crankshaft, is held inward by its springs, in "neutral". As you give it gas, the rise in rpm throws the shoes outward against the clutch drum, which is solid with the rear wheel via the 1st gear set. This causes the bike to move forward and increase in speed. Above 10mph the 1st spd clutch stays solid with the double sided drum, meanwhile the centrifugal 2nd speed clutch, which is solid with the rear wheel via the 2nd speed gear set, is held in by its springs until the bike speed hits 15mph. As the 2nd speed

2007 A55 Revival TS

clutch, which is moving faster than the drum because of the different gear sets, begins to rub, the one-way 8-roller "clutch" ratcheted at the center of the largest gear (1st spd driven), unlocks the two gear sets, allowing 2nd gear to over-ride 1st, thus shifting into 2nd gear. A second one-way roller "clutch" ratcheted at the center of the clutch drum allows the bike to go in reverse freely.
