essence evidence informed practice combines clinical reasoning based on current best evidence with authority based knowledge and a pathophysiological rationale derived from extrapolation of basic science knowledge Unlike other published textbooks that overemphasize the research component in decision making this book aims to address the clinical reality of having to make decisions on the management of a patient with hip knee pain in the absence of a comprehensive scientific rationale using other sources of knowledge It offers an evidence informed textbook that values equally research evidence clinician expertise and patient preference The book is edited by three recognised world leaders in clinical research into manual therapy and chronic pain Their research activities are concentrated on the evidence based management of musculoskeletal pain conditions using conservative interventions For this book they have combined their knowledge and clinical expertise with that of 54 additional contributors all specialists in the field The contributors include a mix of clinicians and clinician researchers Hip and Knee Pain Disorders is unique in bringing together manual therapies and exercise programs in a multimodal approach to the management of these pain conditions from both a clinical but also evidence based perspective It acknowledges the expanding direct access role of the physical therapy profession The book provides an important reference source for clinicians of all professions interested in conservative management of the hip and knee regions It will also be useful as a textbook for students at both entry and post graduate level *Thinking about Bribery* Philip M. Nichols,Diana C. Robertson,2017-09-07 Bribery is perhaps the most visible and most frequently studied form of corruption Very little research however examines the individual decision to offer or accept a bribe or how understanding that decision can help to effectively control bribery This book brings together research by scholars from a variety of disciplines studying the mind and morality who use their research to explain how and why decisions regarding participation in bribery are made It first examines bribery from the perspective of brain structure then approaches the decision to engage in bribery from a cognitive perspective It examines the psychological costs imposed on a person who engages in bribery and studies societal and organizational norms and their impact on bribery This is an ideal read for scholars and other interested persons studying business ethics bribery and corruption corruption control and the applications of neuroscience in a business environment Noise-induced hearing loss: From basic to clinical research Zhiwu Huang,Wei Qiu,Hui Wang,Bin Ye,Vicky Zhang,2023-04-13
