Introduction

The Universal Software Radio Peripheral, or USRP (pronounced "usurp") is designed to allow general purpose computers to function as high bandwidth software radios. In essence, it serves as a digital baseband and IF section of a radio communication system. In addition, it has a well-defined electrical and mechanical interface to RF front-ends (daughterboards) which can translate between that IF or baseband and the RF bands of interest.

The basic design philosophy behind the USRP has been to do all of the waveform-specific processing, like modulation and demodulation, on the host CPU. All of the high-speed general purpose operations like digital up- and downconversion, decimation and interpolation are done on the FPGA.

It is anticipated that the majority of USRP users will never need to use anything other than the standard FPGA configuration. However, for those users that wish to, the FPGA design may be changed or replaced. All of the interfaces are well defined and documented.

Optimizing Automation in Engineering With Energy Systems and Communication Networks Balyan, Vipin, Varshney, Tarun, Gupta, Sandeep, Gupta, Gunjan, 2025-07-23 Optimizing automation in engineering relies on the integration of advanced energy systems and communication networks As industries move toward smarter more efficient operations the collaboration between automation technologies sustainable energy solutions and real time data exchange is essential Effective communication networks enable coordination in automated systems while intelligent energy management ensures reliability and sustainability This convergence enhances system performance and reduces operational costs while supporting the demand for environmentally responsible engineering solutions Exploring this integration may offer valuable insights into the future of automated engineering and its role in smarter infrastructure Optimizing Automation in Engineering With Energy Systems and Communication Networks explores how the integration of automation energy systems and communication networks can improve efficiency reliability and sustainability in engineering applications It examines the ways in which real time data exchange and intelligent energy management contribute to optimizing automated processes and infrastructure This book covers topics such as data science fuzzy logic and sustainability and is a useful resource for engineers business owners academicians researchers and data scientists

Inventive Computation Technologies S. Smys, Robert Bestak, Álvaro Rocha, 2019-11-02 With the intriguing development of technologies in several industries along with the advent of ubiquitous computational resources there are now ample opportunities to develop innovative computational technologies in order to solve a wide range of issues concerning uncertainty imprecision and vagueness in various real life problems The challenge of blending modern computational techniques with traditional computing methods has inspired researchers and academics alike to focus on developing innovative computational techniques In the near future computational techniques may provide vital solutions by effectively using evolving technologies such as computer vision natural language processing deep learning machine learning scientific computing and computational vision A vast number of intelligent computational algorithms are emerging along with increasing computational power which has significantly expanded the potential for developing intelligent applications These proceedings of the International Conference on Inventive Computation Technologies ICICT 2019 cover innovative computing applications in the areas of data mining big data processing information management and security

Handbook of Smart

Antennas for RFID Systems Nemai Chandra Karmakar, 2011-02-25 The Handbook of Smart Antennas for RFID Systems is a single comprehensive reference on the smart antenna technologies applied to RFID. This book will provide a timely reference book for researchers and students in the areas of both smart antennas and RFID technologies. It is the first book to combine two of the most important wireless technologies together in one book. The handbook will feature chapters by leading experts in both academia and industry offering an in-depth description of terminologies and concepts related to smart antennas in various RFID systems applications. Some topics are adaptive beamforming for RFID smart antennas, multiuser interference suppression in RFID tag reading, phased array antennas for RFID applications, smart antennas in wireless systems and market analysis and case studies of RFID smart antennas. This handbook will cover the latest achievements in the designs and applications for smart antennas for RFID as well as the basic concepts, terms, protocols, systems, architectures and case studies in smart antennas for RFID readers and tags. **Information Technology: New Generations** Shahram

Latifi, 2016-03-28 This book collects articles presented at the 13th International Conference on Information Technology New Generations, April 2016 in Las Vegas, NV, USA. It includes over 100 chapters on critical areas of IT including Web Technology, Communications, Security, and Data Mining. *International Master Tax Guide 2009/10*, 2009 This book is a concise foreign tax reference tool for the practitioner who needs quick answers to basic corporate and individual tax questions. *White*

Space Communication Amit Kumar Mishra, David Lloyd Johnson, 2014-10-13 This monograph presents a collection of major developments leading toward the implementation of white space technology, an emerging wireless standard for using wireless spectrum in locations where it is unused by licensed users. Some of the key research areas in the field are covered. These include emerging standards, technical insights from early pilots and simulations, software-defined radio platforms, geo-location, spectrum databases, and current white space spectrum usage in India and South Africa.
