Utilisation Pratique Des Statistiques Bivarieacutees:

Statistique bivariée avec R Mohammed Bennani Dosse, 2011 L'objet de cet ouvrage est de présenter les principales méthodes statistiques permettant d'étudier la liaison entre deux variables. Tout en restant un niveau élémentaire, il forme un ensemble relativement complet sur la question. Cet ouvrage est constitué de neuf chapitres et trois annexes et son organisation est décrite selon la nature qualitative, quantitative ou ordinaire des variables. Les développements de chaque chapitre s'appuient sur un exemple concret qui permet au novice de bien comprendre les notions introduites. La présence de commandes avec le logiciel libre R d'exercices corrigés et d'un chapitre consacré à deux études de cas constituent une facilité offerte au lecteur dans la mise en pratique et l'assimilation des concepts. La fin de chaque chapitre des compléments sont présentés permettant au lecteur qui le souhaite d'aller plus loin ou d'approfondir certains points. Cet ouvrage s'adresse des étudiants en Mathématiques Appliquées, Sciences Sociales, MASS, Administration économique Sociale, AES, écoles d'ingénieurs de commerce ou de gestion. Il s'adresse également tout type de public désireux d'initier ce domaine sans disposer d'un bagage mathématique nécessairement très élevé.

L'analyse statistique univariée Francis Gendreau, 1977 L'analyse statistique multivariée Francis Gendreau, 1976 Statistique vraiment appliquée au sport Stéphane Champely, 2003-11-03

Dans le domaine du sport comme dans tant d'autres, les rapports, les notes de synthèse se sont multipliés de moyennes, de corrélations, de tests de Student et de graphiques en tous genres. Si on ne sait pas demander de savoir calculer ces statistiques qui n'a jamais tenté de confronter la difficulté de comprendre une information livrée sous une forme quantitative et d'en apprécier la pertinence. C'est ce problème que tente de résoudre cet ouvrage d'introduction à la statistique dont les développements mathématiques ont tenté de leur plus simple expression. Chaque chapitre se compose d'une série d'exercices concernant exclusivement des disciplines du milieu sportif, de la biomécanique aux techniques d'entraînement en passant par la psychologie, la sociologie et la physiologie du sport. La première partie expose la production de données, comment mesurer, faire un sondage et planifier des expériences. La deuxième traite ensuite de l'organisation d'un ensemble de données de même nature qu'elles soient des catégories ou des mesures numériques. La troisième partie se concentre sur la comparaison, la liaison, le croisement de ces données avec d'autres données statistiques bivariées. Enfin, la dernière décrit comment mesurer la confiance que l'on peut avoir dans les résultats obtenus, sont-ils généralisables et comment tester des hypothèses sur les données statistiques inférentielles. Comme un manuel, ce livre s'adresse tout particulièrement aux professeurs et étudiants des 1^{er} et 2^e cycles en Sciences et techniques des activités physiques et sportives (STAPS) ainsi qu'à tout intervenant dans le domaine du sport, psychologie du sport, marketing sportif. Mais c'est avec beaucoup d'humour que l'auteur offre aussi tout intervenant du milieu sportif le plaisir de prendre conscience de la multitude d'informations précieuses que peut lui fournir la statistique descriptive lorsqu'elle est vraiment appliquée son champ disciplinaire, psychologie du sport, marketing sportif, etc.

L'outil statistique en géographie Philippe Lahousse, Vincent Piédanna, 1999 L'analyse bivariée ou

bidimensionnelle consiste confronter deux des caractéristiques définies sur une même population. Elle permet de mettre en évidence d'éventuelles interactions entre les phénomènes. Cet ouvrage est consacré aux méthodes numériques de la statistique descriptive. Les représentations graphiques sont employées uniquement lorsqu'elles participent au raisonnement. Il se limite aux concepts statistiques essentiels, excluant tout recours inutile à l'outil mathématique. Il propose de nombreux exemples de traitements statistiques de données empruntés à l'univers géographique.
