

Solving Absolute Value Equations

STEPS FOR SOLVING:

1. Isolate the absolute value expression
2. Write the problem in TWO CASES

Case 1: Drop the || and keep the number on the opposite side of the equal sign (=) positive

Case 2: Drop the || and change the number on the opposite side of the equal sign (=) to negative

3. Solve both equations

EXAMPLE 1:

$$|4x + 20| = 32$$

Case 1: $4x + 20 = 32$

Case 2: $4x + 20 = -32$

$$x = \{ _, _ \}$$

EXAMPLE 2:

$$\left| \frac{x}{5} - 10 \right| + 3 = 6$$

Case 1: $\frac{x}{5} - 10 = 3$

Case 2: $\frac{x}{5} - 10 = -3$

$$x = \{ _, _ \}$$

Howland, 1974 *Resources in Education*, 1998 **Research in Education**, 1974 *Judgment and Decision-Making Research in Accounting and Auditing* Robert H. Ashton, Alison Hubbard Ashton, 1995-09-29 A timely and comprehensive study on behavioural decision making within the field of accounting *Accelerating MATLAB Performance* Yair M. Altman, 2014-12-11 The MATLAB programming environment is often perceived as a platform suitable for prototyping and modeling but not for serious applications One of the main complaints is that MATLAB is just too slow *Accelerating MATLAB Performance* aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed Packed with thousands of helpful tips it leaves no stone unturned discussing every aspect of MATLAB Ideal for novices and professionals alike the book describes MATLAB performance in a scale and depth never before published It takes a comprehensive approach to MATLAB performance illustrating numerous ways to attain the desired speedup The book covers MATLAB CPU and memory profiling and discusses various tradeoffs in performance tuning It describes both the application of standard industry techniques in MATLAB as well as methods that are specific to MATLAB such as using different data types or built in functions The book covers MATLAB vectorization parallelization implicit and explicit optimization memory management chunking and caching It explains MATLAB's memory model and details how it can be leveraged It describes the use of GPU MEX FPGA and other forms of compiled code as well as techniques for speeding up deployed applications It details specific tips for MATLAB GUI graphics and I/O It also reviews a wide variety of utilities libraries and toolboxes that can help to improve performance Sufficient information is provided to allow readers to immediately apply the suggestions to their own MATLAB programs Extensive references are also included to allow those who wish to expand the treatment of a particular topic to do so easily Supported by an active website and numerous code examples the book will help readers rapidly attain significant reductions in development costs and program run times *Robust Control Systems with Genetic Algorithms* Mo Jamshidi, Renato A. Krohling, Leandro dos S. Coelho, Peter J. Fleming, 2018-10-03 In recent years new paradigms have emerged to replace or augment the traditional mathematically based approaches to optimization The most powerful of these are genetic algorithms GA inspired by natural selection and genetic programming an extension of GAs based on the optimization of symbolic codes *Robust Control Systems with Genetic Algorithms* builds a bridge between genetic algorithms and the design of robust control systems After laying a foundation in the basics of GAs and genetic programming it demonstrates the power of these new tools for developing optimal robust controllers for linear control systems optimal disturbance rejection controllers and predictive and variable structure control It also explores the application of hybrid approaches how to enhance genetic algorithms and programming with fuzzy logic to design intelligent control systems The authors consider a variety of applications such as the optimal control of robotic manipulators flexible links and jet engines and illustrate a multi objective genetic algorithm approach to the design of robust

controllers with a gasification plant case study The authors are all masters in the field and clearly show the effectiveness of GA techniques Their presentation is your first opportunity to fully explore this cutting edge approach to robust optimal control system design and exploit its methods for your own applications Fundamentals: Schrödinger's Equation to Deep Learning N.B. Singh, Focusing on the journey from understanding Schrödinger's Equation to exploring the depths of Deep Learning this book serves as a comprehensive guide for absolute beginners with no mathematical backgrounds Starting with fundamental concepts in quantum mechanics the book gradually introduces readers to the intricacies of Schrödinger's Equation and its applications in various fields With clear explanations and accessible language readers will delve into the principles of quantum mechanics and learn how they intersect with modern technologies such as Deep Learning By bridging the gap between theoretical physics and practical applications this book equips readers with the knowledge and skills to navigate the fascinating world of quantum mechanics and embark on the exciting journey of Deep Learning The Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology *U.S. Government Research Reports* ,1964 Scientific and Technical Aerospace Reports ,1992 *Design Recommendations for Intelligent Tutoring Systems: Volume 10 - Strengths, Weaknesses, Opportunities and Threats (SWOT) Analysis of Intelligent Tutoring Systems* Anne Sinatra, Art Graesser, Xiangen Hu, Gregory Goodwin, Vasile Rus, 2023-03-10 This book is a resource for those who are new to intelligent tutoring systems ITSs as well as those with a great deal of experience with them This is the tenth book in our Design Recommendations for Intelligent Tutoring Systems book series The focus of this book is on Strengths Weaknesses Opportunities and Threats SWOT Analyses of varying components of ITSs Each chapter in the book represents a different topic area and includes a SWOT analysis that is specific to that topic and how it relates to ITSs This book can be read in order or a reader can choose a specific topic area and move directly to that chapter Each SWOT Analysis describes the current state of the topic area and how the lessons learned from the analysis could be applied to the Generalized Intelligent Framework for Tutoring GIFT Sottolare et al 2012 Sottolare et al 2017 GIFT is an ITS architecture that is open source modular and domain independent Sottolare et al 2017 Each book in the design recommendations series has addressed a

Strategies for Teachers Paul D. Eggen, Donald P. Kauchak, 1988 MODELS AND PARADIGMS FOR TEACHING Collective Goods and Higher Education Research Roger Benjamin, 2018-09-19 With this volume the author demonstrates how a collective goods approach to higher education research can alleviate problems of rising costs declining resources and growing concerns about undergraduate learning In taking this approach the author presents new tools of analysis borrowed from cognitive science economics data analytics education technology and measurement science to investigate higher education's place in society as a public or private good By showing how these tools can be utilized to re orient current research this volume offers scholars and policy makers an argument for the large scale use of scientific and economic approaches to higher education's most pressing issues

Challenges in Scientific Computing - CISC 2002 Eberhard Baensch, 2012-12-06 The conference Challenges In Scientific Computing CISC 2002 took place from October 2 to 5 2002 The hosting institution was the Weierstrass Institute for Applied Analysis and Stochastics WIAS in Berlin Germany The main purpose of this meeting was to draw together researchers working in the fields of numerical analysis and scientific computing with a common interest in the numerical treatment and the computational solution of systems of nonlinear partial differential equations arising from applications of physical and engineering problems The main focus of the conference was on the problem class of non linear transport diffusion reaction systems chief amongst these being the Navier Stokes equations semiconductor device equations and porous media flow problems The emphasis was on unsolved problems challenging open questions from applications and assessing the various numerical methods used to handle them rather than concentrate on accurate results from solved problems Thanks to the

participants it was an interesting meeting The presentations stimulated exchanging ideas and lively discussions This proceedings comprises 13 papers from the conference ranging from numerical methods for flow problems multigrid methods semiconductor and microwave simulation solution methods finite element analysis to software aspects This interesting conference would not have been possible without the help of the staff of the WIAS I thank all participants and all our supporters especially those not onstage for making the conference a success
