Chapter 4 Solutions

- 4.1 (A) During compression and expansion, the air does not leave the volume so it is analyzed as a system, not a control volume.
- 4.2 (D) The other parts represent time-varying flows.
- 4.3 (B) When using this continuity equation, the area at Section 2 will be different than the area at Section 1. The diameter typically changes from section 1 to section 2.
- 4.4 (D) We will use V to represent velocity in most problem solutions in this chapter, since the equation editor doesn't allow a different font. Since systems are not of interest in this chapter, the volume doesn't appear except in Section 4.3 on transient flows. Use Table C-3:

$$\rho_1 A_1 V_1 = \rho_2 A_2 V_2 \quad \frac{1}{0.07341} \frac{\text{kg}}{\text{m}^3} \times 40 \frac{\text{m}}{\text{s}} = \frac{1}{0.114} \frac{\text{kg}}{\text{m}^3} \times V_2 \quad \therefore V_2 = \underline{62.1 \text{ m/s}}$$

- 4.5 (A) Put all distances in meters to be safe. Then

$$A_1 V_1 = A_2 V_2 \quad (\pi \times 0.01^2) \times 20 = (2\pi \times 0.1 \times 0.002) \times V_2 \quad \therefore V_2 = \underline{5 \text{ m/s}}$$

- 4.6 (C) The pump work W_p is related to the shaft work by $\dot{W}_p = -\dot{W}_s$. With no losses, the

temperature remains unchanged so the internal energy change is zero and Eq. 4.18 provides response (C).

- 4.7 (B) Eq. 4.19 simplifies to $0 = -h + \frac{V_1^2 - V_2^2}{2}$. Using $h_1 - h_2 = C_p (T_1 - T_2)$,

$$T_1 - T_2 = \frac{V_1^2 - V_2^2}{2C_p} = \frac{(180^2 - 20^2) \text{ m}^2/\text{s}^2}{2 \times 1000 \text{ J/kg} \cdot ^\circ\text{C}} = \underline{16^\circ\text{C}}$$

where we used $C_p = 1000 \text{ J/kg} \cdot ^\circ\text{C}$. Recall that the units convert as

of the United Nations,2019-02-28 The degradation of ecosystems including forests and the associated loss of biodiversity particularly due to human induced threats and climate change has gained increased attention from scientists and policymakers The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well being to the impacts on ecosystems of changes in natural resources The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity supporting the idea that economic instruments if appropriately applied developed and interpreted can inform policy and decision making processes Only a few ecosystem services however have explicit market value and are traded in open markets many especially those categorized as having passive use value remain invisible and are rarely accounted for in traditional economic systems The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity Most ecosystem services are considered public goods and tend to be overexploited by society Many methods have been applied to the economic valuation of ecosystem services The use of these methods as well as the interpretation of their results requires familiarity with the ecological political normative and socio economic context and the science of economics Recognizing demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well being The aim of this manual is to enhance understanding of ecosystem services and their valuation The specific target group comprises governmental officers in planning units and field level officers and practitioners in key government departments in Bangladesh responsible for project development including the Ministry of Environment and Forests and its agencies Most of the examples and case studies presented herein therefore are tailored to the Bangladesh context but the general concepts approaches and methods can be applied to a broad spectrum of situations This manual focuses on valuing forest related ecosystem services including those provided by trees outside forests It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making Among other things the manual explores the basics of financial mathematics e g the time value of money discounting cost benefit analysis and profitability and risk indicators the main methods of economic valuation examples of the valuation of selected ecosystem services and inputs for considering values in decision making
