ff	<u>f</u>
Ff	<u>F</u> & <u>f</u>

2. During fertilization, two gamete nuclei fuse, and the diploid condition is restored. Give the diploid genotype produced by fusion of the following gamete genotypes.

Gamete genotype X Gamete genotype	→	Diploid genotype
f	f	<u>ff</u>
F	f	<u>Ff</u>
F	F	<u>FF</u>

Extending the Scalability of Linkage Learning Genetic Algorithms Ying-ping Chen, 2006 Genetic algorithms GAs are powerful search techniques based on principles of evolution and widely applied to solve problems in many disciplines However most GAs employed in practice nowadays are unable to learn genetic linkage and suffer from the linkage problem The linkage learning genetic algorithm LLGA was proposed to tackle the linkage problem with several specially designed mechanisms While the LLGA performs much better on badly scaled problems than simple GAs it does not work well on uniformly scaled problems as other competent GAs Therefore we need to understand why it is so and need to know how to design a better LLGA or whether there are certain limits of such a linkage learning process This book aims to gain better understanding of the LLGA in theory and to improve the LLGA's performance in practice It starts with a survey of the existing genetic linkage learning techniques and describes the steps and approaches taken to tackle the research topics including using promoters developing the convergence time model and adopting subchromosomes
