Phototrophic Organisms Rüdiger Hell,Christiane Dahl,David B. Knaff,Thomas Leustek,2008-03-19 Sulfur is one of the most
versatile elements in life due to its reactivity in different oxidation and reduction states In phototrophic organisms the redox
properties of sulfur in proteins and of sulfur containing metabolites are particularly important in the interaction between the
reductive assimilation processes of photosynthesis and reactive oxygen species that arise as by products of electron transport
chains Thiol groups in proteins and metabolites are targets of reactive oxygen species resulting in potential damage and at
the same time giving rise to redox signal cascades that trigger repair reactions and adaptation to environmental stress
Further reduced sulfur compounds play a prominent role as electron donors for photosynthetic carbon dioxide fixation in
anoxygenic phototrophic sulfur bacteria Interest in the investigation of the multiple functions of sulfur related processes has
increased exponentially in recent years especially in molecular and cellular biology biochemistry agrobiotechnology and
ecology This book provides for the first time in depth and integrated coverage of the functions of sulfur in phototrophic
organisms including bacteria plants and algae it bridges gaps between biochemistry and cellular biology of sulfur in these
organisms and of biology and environments dominated by them This book is designed to be a comprehensive resource on
