Volatility in State Spending for Higher Education Jennifer A. Delaney, 2023-10-30 The severity of cuts and the unpredictability in state funding for higher education have garnered headlines across the nation since the turn of the present century In this context the authors in this new groundbreaking volume argue that too little attention is paid to the consequences of volatility in funding as most discussions focus on levels of funding Their research addresses an important blind spot in the academic literature since predictability matters to institutions students families and states In addition the risks of operating in an uncertain financial environment have led to behaviors that are not always in the best interests of states institutions faculty students or the public good

Handbook of Neurological Rehabilitation Richard J. Greenwood, Thomas M. McMillan, Michael P. Barnes, Christopher D. Ward, 2005-08-16 Changes in the focus of neurological practice worldwide have led to the need for new standard texts that reflect the current state of this expanding area of clinical expertise The second edition of the *Handbook of Neurological Rehabilitation* is a major reference source that fulfils this need providing an invaluable resource for all professions that work with patients suffering from neurological disorders It brings restorative neurology to the bedside and shows how a reiterative goal oriented problem solving training programme can benefit patients sometimes on a scale not achieved by pharmacological or surgical interventions The book is divided into three sections all of which have been updated Section One explores the clinical and

biological principles underpinning rehabilitation practice in the context of neurological disablement Section Two describes the assessment treatment and management of the major physical cognitive and behavioural impairments and the resulting functional deficits that may follow or accompany neurological disease The final section explores in more detail these problems and their management in relation to the more common specific disorders of the nervous system The text emphasises the fact that rehabilitation is an ongoing process involving multidisciplinary problem solving goal setting and education in which organised care is more effective than unorganised care and the breakdown of professional barriers within rehabilitation to facilitate the use of combined treatment techniques improves outcome It describes the contribution made by neural reorganisation and compensatory mechanisms to recovery of function focuses on the avoidance of secondary deficit and explores the physical cognitive affective and behavioural problems that may occur after neurological damage At a time when new medical technologies threaten to fragment the integrity of medical care at individual and societal levels it is crucial that all those involved in the management of chronic neurological disease have a working knowledge of the contents of this book Their perspective on clinical practice will then be truly integrated and holistic and their patients will benefit accordingly

Parkinson's Disease and Nonmotor Dysfunction Ronald F. Pfeiffer,ivan Bodis-Wollner,2007-11-10 Parkinson s

Disease and Nonmotor Dysfunction fills a major gap in the current rapidly growing body of knowledge concerning Parkinson's disease. Drs Pfeiffer and Bodis Wollner have correctly perceived that many nonmotor features of Parkinson's disease are given insufficient attention in the medical literature. Unfortunately they are often also given insufficient attention by the practicing neurologists who see these patients. As recently pointed out, there is clearly much more to Parkinson's disease than depletion of the nigrostriatal dopamine system. 1 Parkinson's disease not just multiple system atrophy is a multisystem disorder both pathologically and in its clinical manifestations. This is clearly true for the various motor system abnormalities which are not fully corrected by dopamine replacement therapy strategies but also for the nonmotor system abnormalities that are the subject of this volume. Although recently there has been increased awareness of the cognitive, psychiatric and sleep disorders commonly associated with Parkinson's disease, many of their manifestations remain unrecognized and their importance in managing patients is underestimated. Even less attention is paid to the myriad of other nonmotor disturbances that plague these patients. For example, among the autonomic disorders, although orthostatic hypotension is well recognized, it is usually attributed to dopaminergic medications rather than to effects of the underlying disease. Urologic disorders are also very familiar in these patients but may not be properly understood or well managed. *The Office*, 1974
