Non-Target Effects of Pesticides on Organisms Inhabiting Agroecosystems Johann G. Zaller, Carsten A. Brühl, 2019-10-17 Pesticide usage is increasing worldwide and considered among the main factors contributing to the global decline in biodiversity This Research Topic provides an overview of the state of knowledge regarding non target effects of herbicides fungicides insecticides and rodenticides on a variety of ecosystem functions and organisms Taxa covered in the contributions include algae amphibians aquatic fungi aquatic insects bats bumblebees butterflies earthworms enchytraeids honeybees plants rodents and soil microorganisms The papers also highlight many gaps in our understanding of non target effects of pesticides and their consequences for biodiversity and functions of various ecosystems Overall it became clear that priorities for future work on pesticides and their effects should more focus on investigating or simulating realistic field situations i.e. multiple applications of pesticides during the growing season including their temporal and spatial interactions with fauna and flora

Deep Learning for Marine Science Haiyong Zheng, Mark C. Benfield, Hongsheng Bi, Xuemin Cheng, 2024-05-15 Deep learning DL mainly composed of deep and complex neural networks such as recurrent network and convolutional network is an emerging research branch in the field of artificial intelligence and machine learning DL revolution has a far reaching impact on all scientific disciplines and every corner of our lives With continuing technological advances marine science is entering into the big data era with the exponential growth of information DL is an effective means of harnessing the power of big data Combined with unprecedented data from cameras acoustic recorders satellite remote sensing and large model outputs DL enables scientists to solve complex problems in biology ecosystems climate energy as well as physical and chemical interactions Although DL has made great strides it is still

only beginning to emerge in many fields of marine science especially towards representative applications and best practices for the automatic analysis of marine organisms and marine environments DL in nowadays marine science mainly leverages cutting edge techniques of deep neural networks and massive data which collected by in situ optical or acoustic imaging sensors for underwater applications such as plankton classification and coral reef detection This research topic aims to expand the applications of marine science to cover all aspects of detection classification segmentation localization and density estimation of marine objects organisms and phenomena

Reviewing **Target Notes For 12th Science**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence.
