The Routledge Handbook of Industry and Development is a global overview of industrialisation Each chapter will provide readers with contemporary insights into this this essential aspect of economic development Industrialisation has been at the forefront of discussion on economic development since the earliest days of development economics But over the last fifty years the manufacturing sectors of different countries and regions have grown at strikingly different rates In 1960 developing countries took a very small share of global manufacturing production Today the position had changed radically with fast growth of manufacturing in many parts of what was originally the developing world particularly in China and the rest of East Asia On the other hand countries in Africa and parts of Latin America have been largely left behind by this process of industrialisation This volume aims to illuminate this uneven development and takes stock of the current issues that hinder and support industrialisation in low and middle income economies This Handbook is a collection of chapters on different aspects of industrialisation experience in a range of countries Key themes include the role of manufacturing in growth the nature of structural change at different stages of development the role of manufacturing in employment creation alternative options for trade and industrial policy the key role of technology and technical change and the impact of globalisation and the spread of global value chains and foreign direct investment on prospects for industrialisation Several chapters discuss individual country experiences with examples from India Mexico South Africa and Tanzania as well as an overview of African industrialisation This authoritative Handbook will be a key reference source for those studying or wishing to understand contemporary economic development Offering inspiration and direction for future research this landmark volume will be of crucial importance to all development economics scholars and researchers **Handbook of Climate Change and India** Navroz Dubash, 2012-03-15

How do policymakers businesses and civil society in India approach the challenge of climate change What do they believe global climate negotiations will achieve and how And how are Indian political and policy debates internalizing climate change Relatively little is known globally about internal climate debate in emerging industrializing countries but what happens in rapidly growing economies like India s will increasingly shape global climate change outcomes This Handbook brings together prominent voices from India including policymakers politicians business leaders civil society activists and academics to build a composite picture of contemporary Indian climate politics and policy One section lays out the range of positions and substantive issues that shape Indian views on global climate negotiations Another delves into national politics around climate change A third looks at how climate change is beginning to be internalized in sectoral policy discussions over energy urbanization water and forests The volume is introduced by an essay that lays out the critical issues shaping climate politics in India and its implications for global politics The papers show that within India climate change is approached primarily as a developmental challenge and is marked by efforts to explore

how multiple objectives of development equity and climate mitigation can simultaneously be met In addition Indian perspectives on climate negotiations are in a state of flux Considerations of equity across countries and a focus on the primary responsibility for action of wealthy countries continue to be central but there are growing voices of concern on the impacts of climate change on India How domestic debates over climate governance are resolved in the coming years and the evolution of India s global negotiation stance are likely to be important inputs toward creating shared understandings across countries in the years ahead and identify ways forward This volume on the Indian experience with climate change and development is a valuable contribution to both purposes
