What do the blue whale and great white shark have in common?
 Both these creatures live in the water, have dorsal fins, and
streamlined bodies, but in reality, they're as different from one another
 as Maya and the shark.

The blue whale breathes through lungs and has a skeleton of bones
 whereas the great white shark breathes through gills and has
cartilage instead of bones.

Thus, a blue whale is a mammal like Maya and not a fish like the
 great white shark.

In this manner, scientists group organisms into different categories after
 researching their similarities and differences. This system of grouping is
 called taxonomic classification.

Trying to find a specific organism among the two million discovered
 organisms on Earth can become a laborious task for a scientist. Complicating
 things further is the fact that a single species is often known
 by different names in different countries.

Taxonomic classification also helps scientists name organisms. These names
 are very specific for each organism and help to avoid
 confusion.

Early scientists divided the living world into two groups—plants and
animals—based on one major characteristic: how they obtain
nutrition.

Handbook of Scientific Methods of Inquiry for Intelligence Analysis Hank Prunckun, 2010-03-19 With the exponential growth in the intelligence field in the last few years the profession has grown much larger and its mission more complex. Government and private sector security agencies have recruited intelligence analysts to process what has become a voluminous amount of raw information flowing into these agencies' data collection systems. Unfortunately there is an unmet need for analysts who are able to process these data. For this reason there are a growing number of colleges and universities that offer intelligence training so that candidates for analyst positions can take up their duties without protracted on the job instruction. *Handbook of Scientific Methods of Inquiry for Intelligence Analysis* offers students in such courses a way of gaining the analytic skills essential to undertake intelligence work. This book acquaints students and analysts with how intelligence fits into the larger research framework. It covers not only the essentials of applied research but also explains the function, structure and operational methods specifically involved in intelligence work. It looks at how analysts work with classified information in a security conscious environment as well as obtaining data via covert methods. Students are left with little doubt about what intelligence is and how it is developed using scientific methods of inquiry. *Reference Manual on Scientific Evidence* National Research Council, Federal Judicial Center, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, 2011-10-26 The Reference Manual on Scientific Evidence Third Edition assists judges in managing cases involving complex scientific and technical evidence by describing the basic tenets of key scientific fields from which legal evidence is typically derived and by providing examples of cases in which that evidence has been used. First published in 1994 by the Federal Judicial Center the Reference Manual on Scientific Evidence has been relied upon in the legal and academic communities and is often cited by various courts and others. Judges faced with disputes over the admissibility of scientific and technical evidence refer to the manual to help them better understand and evaluate the relevance, reliability and usefulness of the evidence being proffered. The manual is not intended to tell judges what is good science and what is not. Instead it serves to help judges identify issues on which experts are likely to differ and to guide the inquiry of the court in seeking an

informed resolution of the conflict The core of the manual consists of a series of chapters reference guides on various scientific topics each authored by an expert in that field The topics have been chosen by an oversight committee because of their complexity and frequency in litigation Each chapter is intended to provide a general overview of the topic in lay terms identifying issues that will be useful to judges and others in the legal profession They are written for a non technical audience and are not intended as exhaustive presentations of the topic Rather the chapters seek to provide judges with the basic information in an area of science to allow them to have an informed conversation with the experts and attorneys

WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification 2009 International Program on Chemical Safety, World Health Organization, 2010 The WHO Recommended Classification of Pesticides by Hazard was approved by the 28th World Health Assembly in 1975 and has since gained wide acceptance When it was published in the WHO Chronicle 29 397 401 1975 an annex which was not part of the Classification illustrated its use by listing examples of classification of some pesticidal active ingredients and their formulations Later suggestions were made by Member States and pesticide registration authorities that further guidance should be given on the classification of individual pesticides Guidelines were first issued in 1978 and have since been revised and reissued every few years Up until the present revision the original guidelines approved by the World Health Assembly in 1975 have been followed without amendment In December 2002 the United Nations Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals UNCETDG GHS approved a document called The Globally Harmonized System of Classification and Labelling of Chemicals with the intent to provide a globally harmonized system¹ GHS to address classification of chemicals labels and safety data sheets The GHS with subsequent revisions is now being widely used for the classification and labeling of chemicals worldwide For this revision of the Classification the WHO Hazard Classes have been aligned in an appropriate way with the GHS Acute Toxicity Hazard Categories for acute oral or dermal toxicity as the starting point for allocating pesticides to a WHO Hazard Class with adjustments for individual pesticides where required It is anticipated that few of the more toxic pesticides will change WHO Hazard Class as a result of this change As has always been the case the classification of some pesticides has been adjusted to take account of severe hazards to health other than acute toxicity as described in Part II The GHS Acute Toxicity Hazard Category for each pesticide is now presented alongside the existing information Page 1
