New Developments in the Visualization and Processing of Tensor Fields David H. Laidlaw, Anna Vilanova, 2012-09-14 Bringing together key researchers in disciplines ranging from visualization and image processing to applications in structural mechanics fluid dynamics elastography and numerical mathematics the workshop

that generated this edited volume was the third in the successful Dagstuhl series. Its aim reflected in the quality and relevance of the papers presented was to foster collaboration and fresh lines of inquiry in the analysis and visualization of tensor fields which offer a concise model for numerous physical phenomena. Despite their utility, there remains a dearth of methods for studying all but the simplest ones; a shortage the workshops aim to address. Documenting the latest progress and open research questions in tensor field analysis, the chapters reflect the excitement and inspiration generated by this latest Dagstuhl workshop held in July 2009. The topics they address range from applications of the analysis of tensor fields to purer research into their mathematical and analytical properties. They show how cooperation and the sharing of ideas and data between those engaged in pure and applied research can open new vistas in the study of tensor fields.

Visualization and Processing of Tensors and Higher Order Descriptors for Multi-Valued Data Carl-Fredrik Westin, Anna Vilanova, Bernhard Burgeth, 2014-07-17. Arising from the fourth Dagstuhl conference entitled Visualization and Processing of Tensors and Higher Order Descriptors for Multi-Valued Data 2011, this book offers a broad and vivid view of current work in this emerging field. Topics covered range from applications of the analysis of tensor fields to research on their mathematical and analytical properties.

Part I: Tensor Data Visualization surveys techniques for visualization of tensors and tensor fields in engineering, discusses the current state of the art and challenges, and examines tensor invariants and glyph design, including an overview of common glyphs. The second Part: Representation and Processing of Higher order Descriptors describes a matrix representation of local phase, outlines mathematical morphological operations, techniques extended for use in vector images, and generalizes erosion to the space of diffusion-weighted MRI. Part III: Higher Order Tensors and Riemannian Finsler Geometry offers powerful mathematical language to model and analyze large and complex diffusion data, such as High Angular Resolution Diffusion Imaging (HARDI) and Diffusion Kurtosis Imaging (DKI). A Part entitled Tensor Signal Processing presents new methods for processing tensor-valued data, including a novel perspective on performing voxel-wise morphometry of diffusion tensor data using a kernel-based approach, explores the free water diffusion model, and reviews proposed approaches for computing fabric tensors, emphasizing trabecular bone research. The last Part: Applications of Tensor Processing discusses metric and curvature tensors, two of the most studied tensors in geometry processing. Also covered is a technique for diagnostic prediction of first episode schizophrenia patients based on brain diffusion MRI data. The last chapter presents an interactive system integrating the visual analysis of diffusion MRI tractography with data from electroencephalography.
