Answer Set Programming for Continuous Domains: A Fuzzy Logic Approach Jeroen Janssen, Steven Schockaert, Dirk Vermeir, Martine De Cock, 2012-04-26 Answer set programming ASP is a declarative language tailored towards solving combinatorial optimization problems It has been successfully applied to e g planning problems configuration and verification of software diagnosis and database repairs However ASP is not directly suitable for modeling problems with continuous domains Such problems occur naturally in diverse fields such as the design of gas and electricity networks computer vision and investment portfolios To overcome this problem we study FASP a combination of ASP with fuzzy logic a class of manyvalued logics that can handle continuity We specifically focus on the following issues

- 1 An important question when modeling continuous optimization problems is how we should handle overconstrained problems i e problems that have no solutions In many cases we can opt to accept an imperfect solution i e a solution that does not satisfy all the stated rules constraints However this leads to the question what imperfect solutions should we choose We investigate this question and improve upon the state of the art by proposing an approach based on aggregation functions
- 2 Users of a programming language often want a rich language that is easy to model in However implementers and theoreticians prefer a small language that is easy to implement and reason about We create a bridge between these two desires by proposing a small core language for FASP and by showing that this language is capable of expressing many of its common extensions such as constraints monotonically decreasing functions aggregators S implicators and classical negation
- 3 A well known technique for solving ASP consists of translating a program P to a propositional theory whose models exactly correspond to the answer sets of P We show how this technique can be generalized to FASP paving the way to implement efficient fuzzy answer set solvers that can take advantage of existing fuzzy reasoners
