Visual Basic Report Tutorial:

Programming in Visual Basic 2010 Jim McKeown, 2010-03-22 This is an introduction to programming using Microsoft's Visual Basic .NET 2010 intended for novice programmers with little or no programming experience or no experience with Visual Basic. The text emphasizes programming logic and good programming techniques with generous explanations of programming concepts written from a non technical point of view. It stresses input processing and output and sequence selection and repetition in code development. File I/O and arrays are included. Later chapters introduce objects, event programming and databases. By taking a slow and steady approach to programming ideas, this book builds new concepts from what the reader has already learned. VB tips and quips inject both humor and insight. The book includes numerous programming examples and exercises, case studies, tutorials, and fixing a program sections for an in depth look at programming problems and tools. Quizzes and review questions throughout each chapter get students to think about the materials and how to use them. Each chapter has a summary and glossary for extra review. The accompanying website www.cambridge.org/us/McKeown has code downloads, I/O and database files from small simple files to large files with thousands of records, flowcharts, deskchecks and audits to aid with program design, coding and debugging. PowerPoint files for every chapter and hundreds of ideas for programs and projects.

Tutorials in Visual Cognition Veronika Coltheart, 2011-01-07 In the late 1980s visual cognition was a small subfield of cognitive psychology and the standard texts mainly discussed just iconic memory in their sections on visual cognition. In the subsequent two decades and especially very recently many remarkable new aspects of the processing of brief visual stimuli have been discovered: change blindness, repetition blindness, the attentional blink, newly discovered properties of visual short term memory and of the face recognition system, the influence of reentrant processing on visual perception and the surprisingly intimate relationships between eyeblinks and visual cognition. This volume provides up to date tutorial reviews of these many new developments in the study of visual cognition written by the leaders in the discipline providing an incisive and comprehensive survey of research in this dynamic field.
