

REASONING

REASONING is the act of deriving a conclusion from certain premises using a given methodology. It can also be the process of thinking, reasoning is logically arguing and also the drawing of inferences..

A machine or a person are meant to reason if they haven't been given explicit instructions on what to do. If it's a new task its supposed to reason on how to solve the problem or come-up with a solution from past experiences or knowledge of the subject.

There are certain capabilities of human reasoning divided into three areas that is:

- i. Mathematical reasoning-examples axioms, definitions, theorems and proofs,
- ii. Logical reasoning- deductive, inductive and ab-ductive,
- iii. Non-logical reasoning- linguistics, language

NB: these three areas of reasoning are in every human being but the level depends on education, environment and genetics. Mostly logical reasoning is what is used in **Artificial Intelligence**.
